

Go to https://renkulab.io and set up your account or sign in if you are already registered. If you have a Github account, you can also use it to log in.

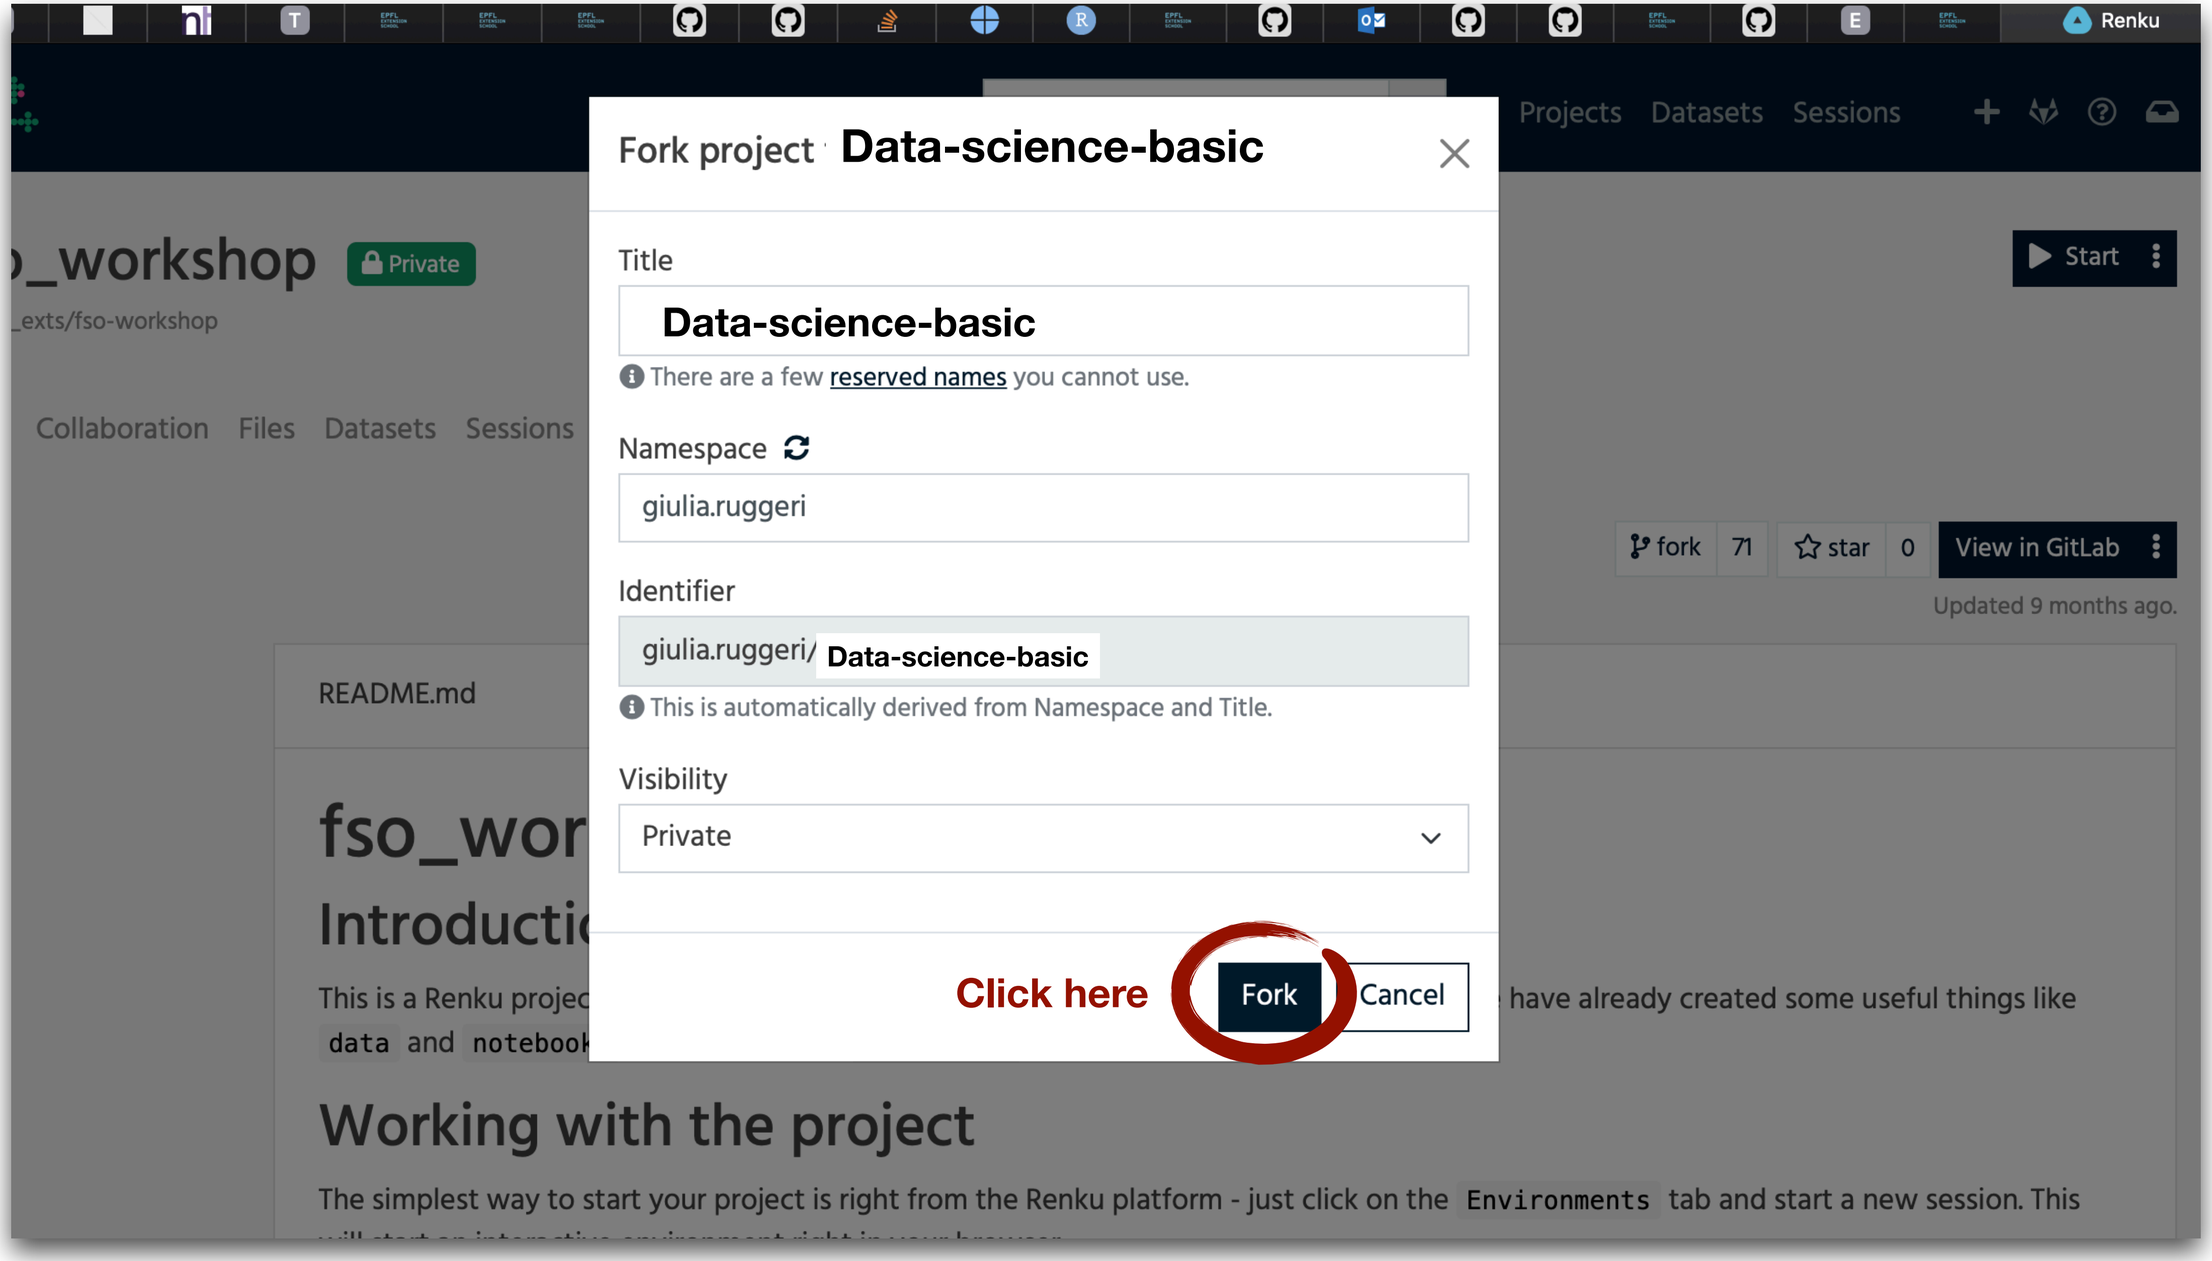

Click here to see all your projects

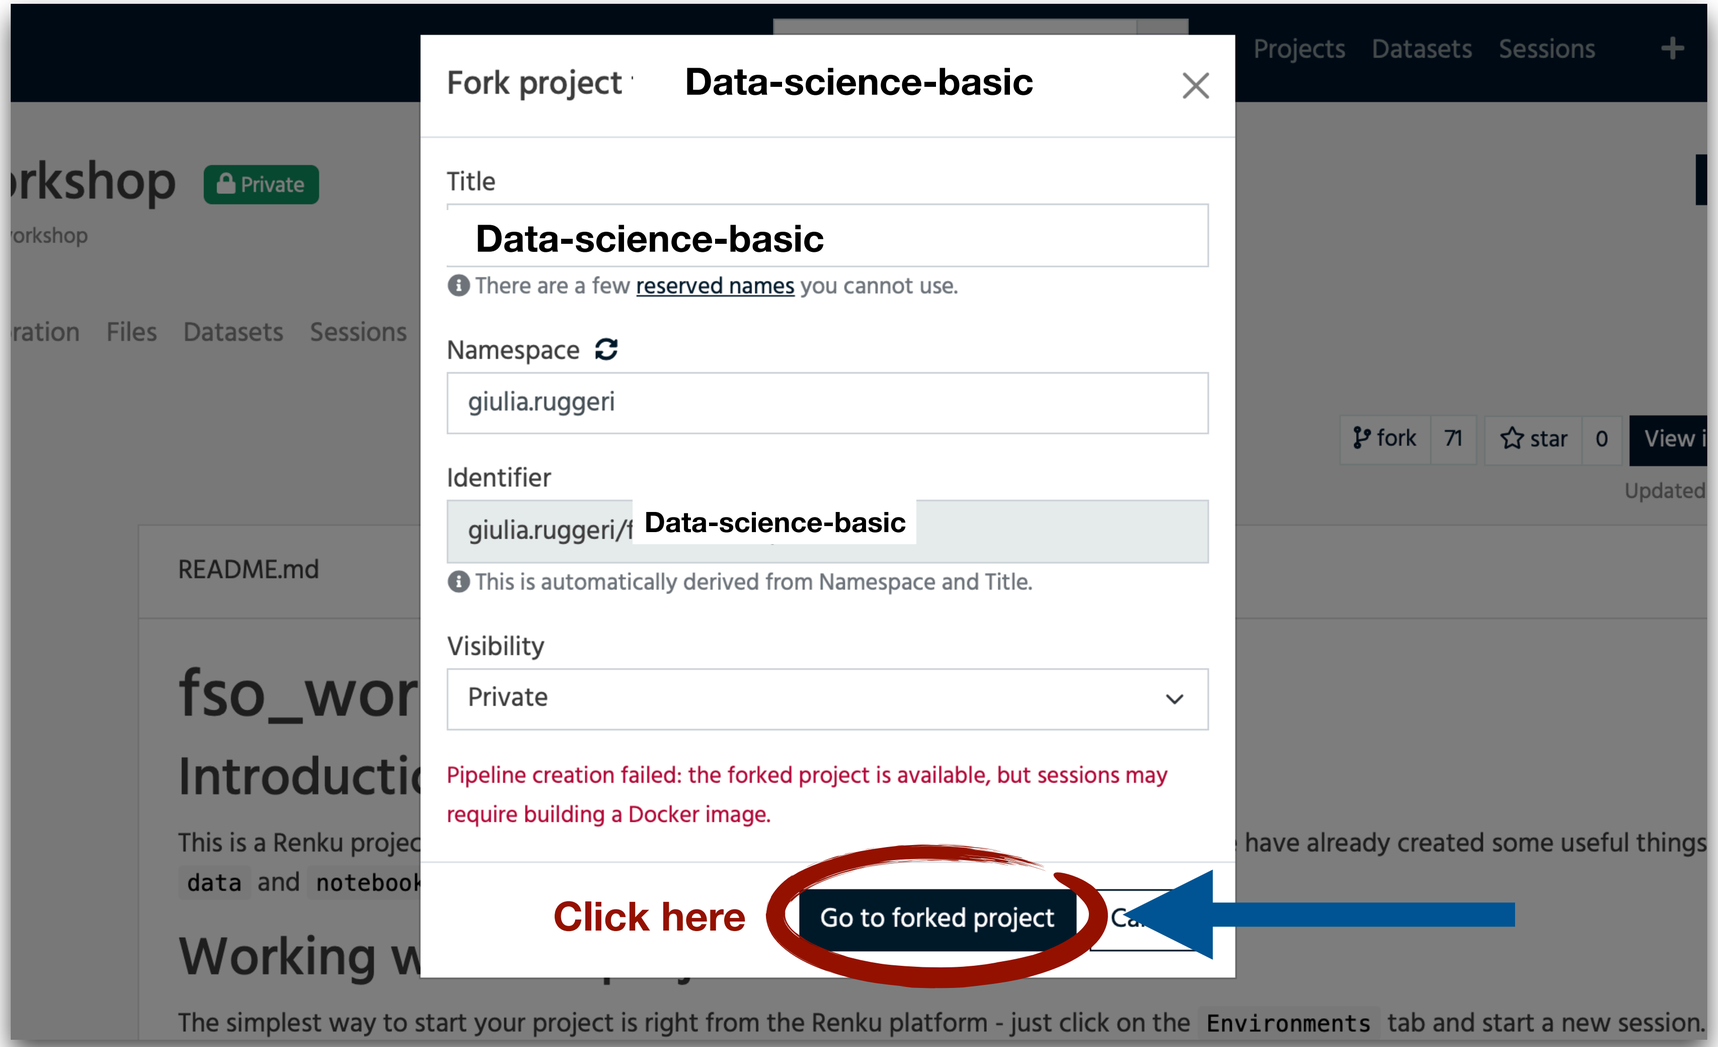

Once you give us your username, we can add you as a "developer" to our project.
This project will appear in your main Renku page as: **datascience_exts/data-science-basic.** If you do not see it under "Recent Projects", you can access it through the project tab! Click on it!

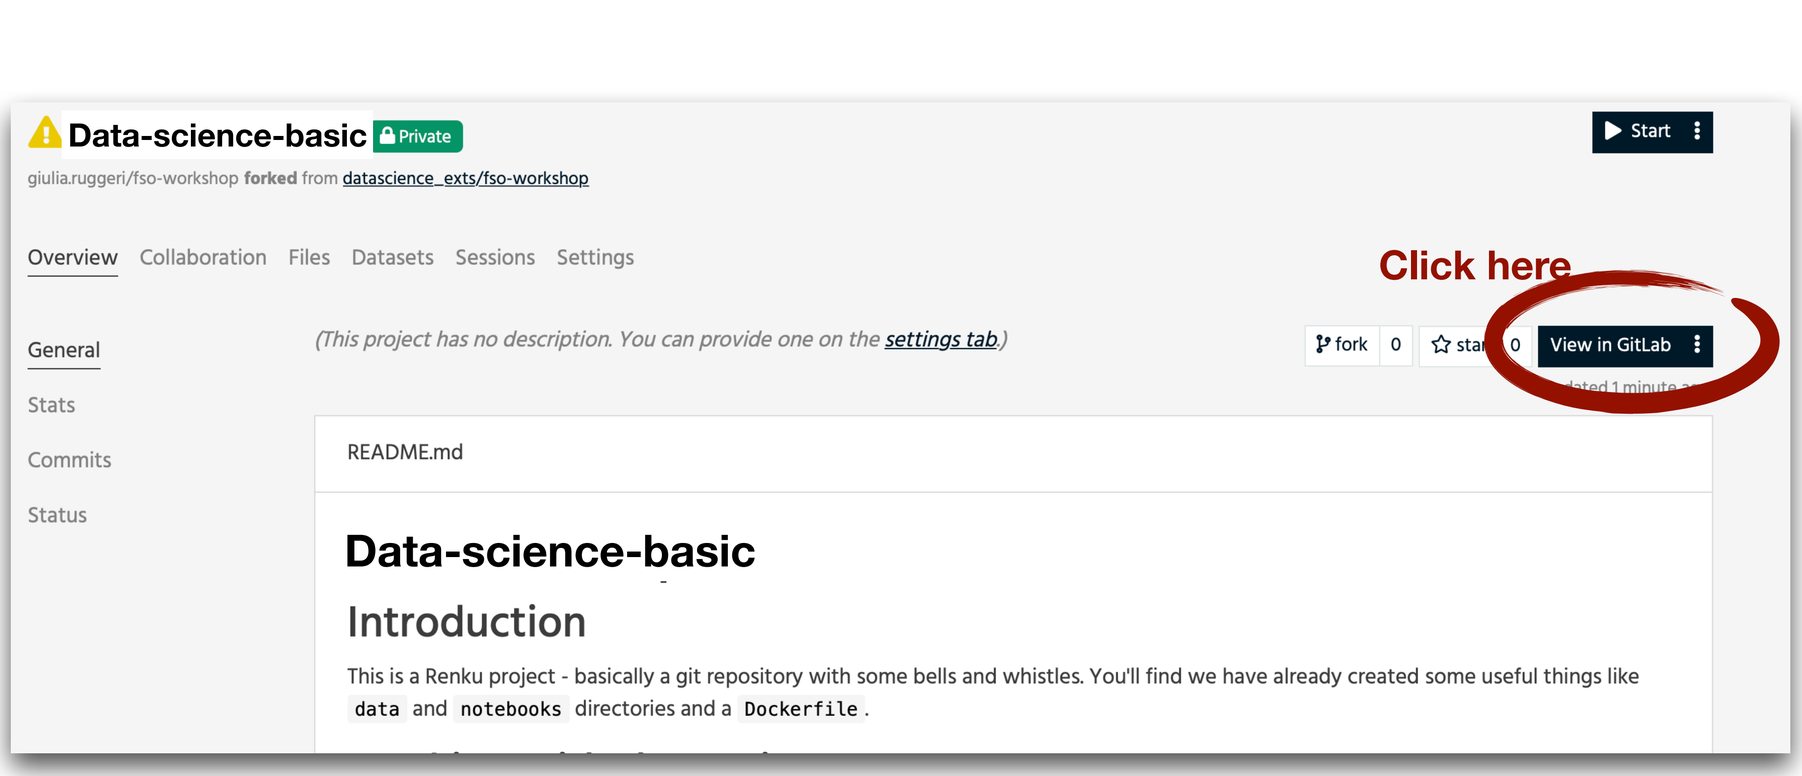

Now you need to fork the project into your own space. This creates a copy of the project on your own page that you will work on.

Introductio
This is a Renku projec
have already created some useful things like
data and notebook
Working with the project
The simplest way to start your project is right from the Renku platform - just click on the Environments tab and start a new session. This

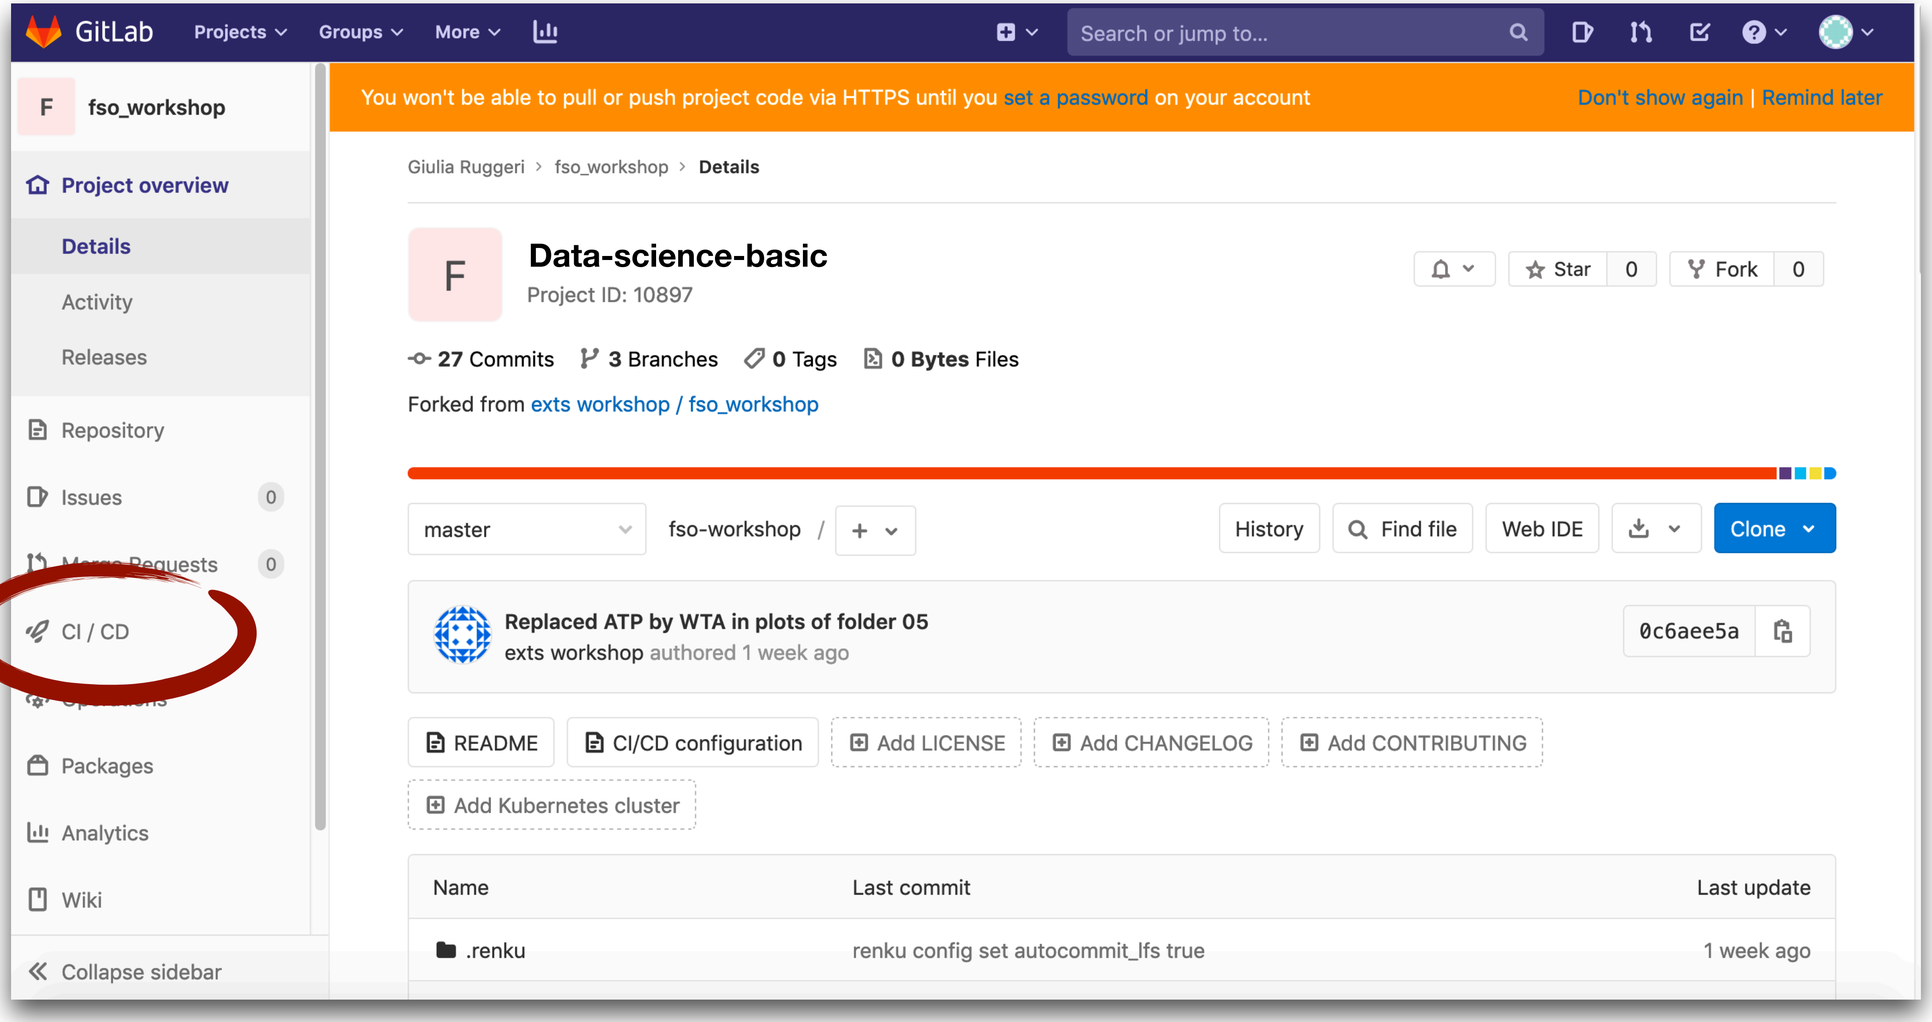

No worries if an error occurs, we will fix it in the next step!

We are now in the forked version of the project

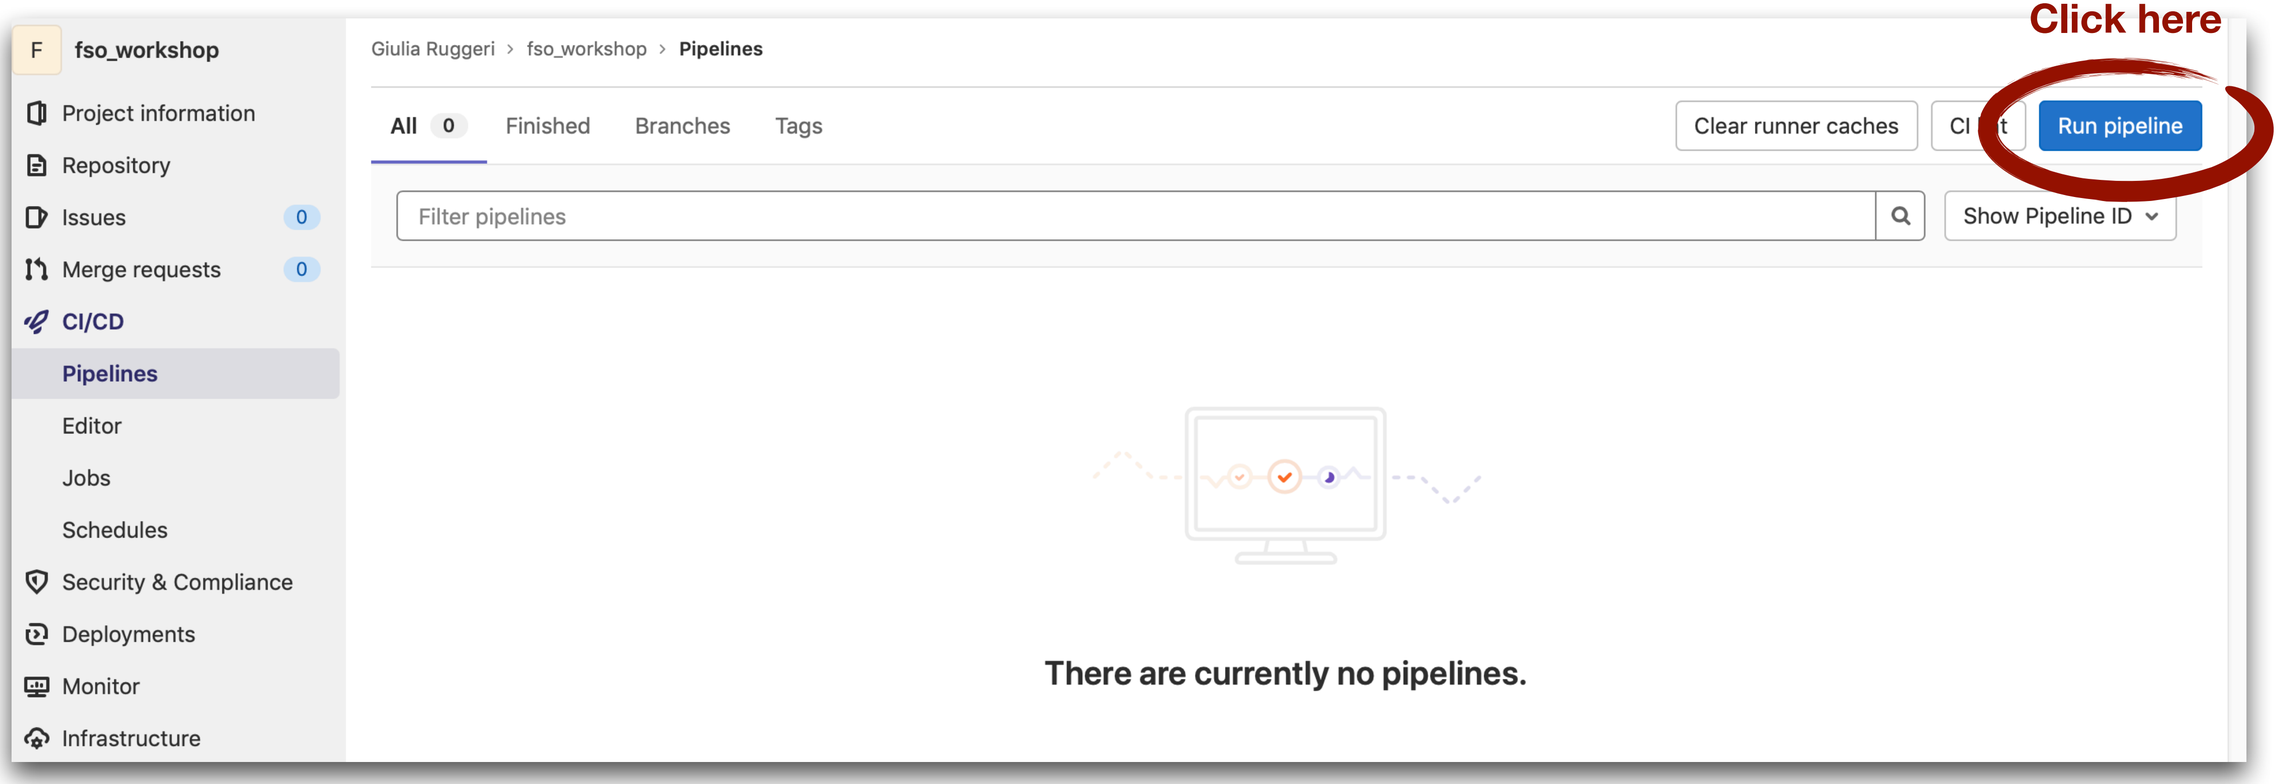

Now we need to fix the error that was generated before. We have to click on "View in Gitlab" to do it. A new window will open.

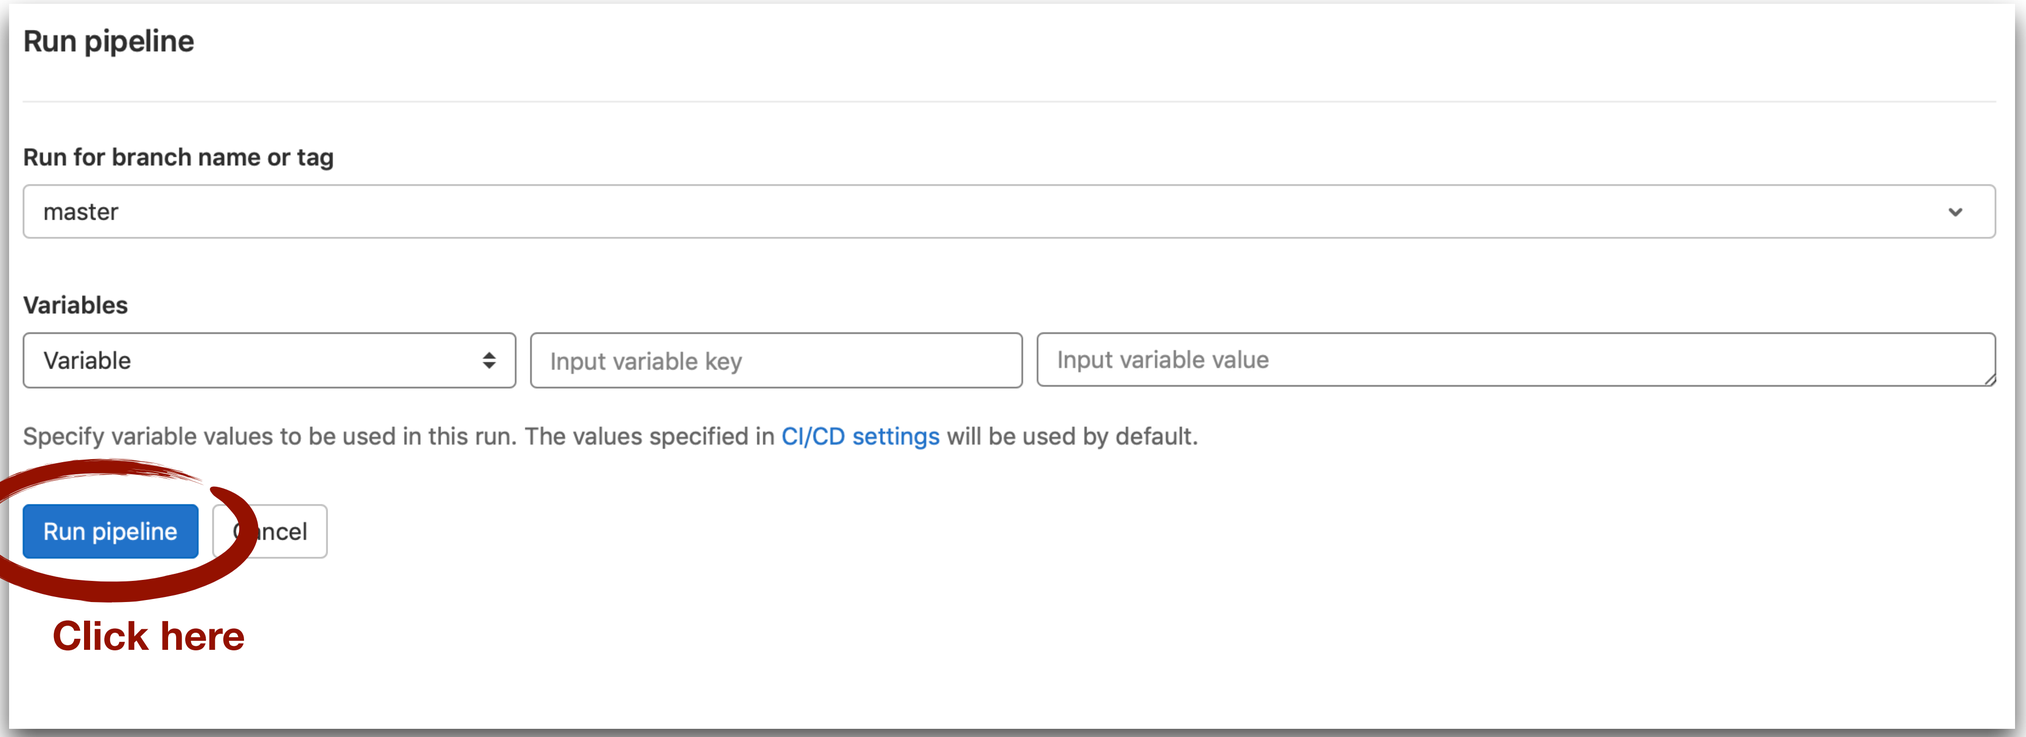

Click here

We click on the "CI / CD" option on the menu on the left.

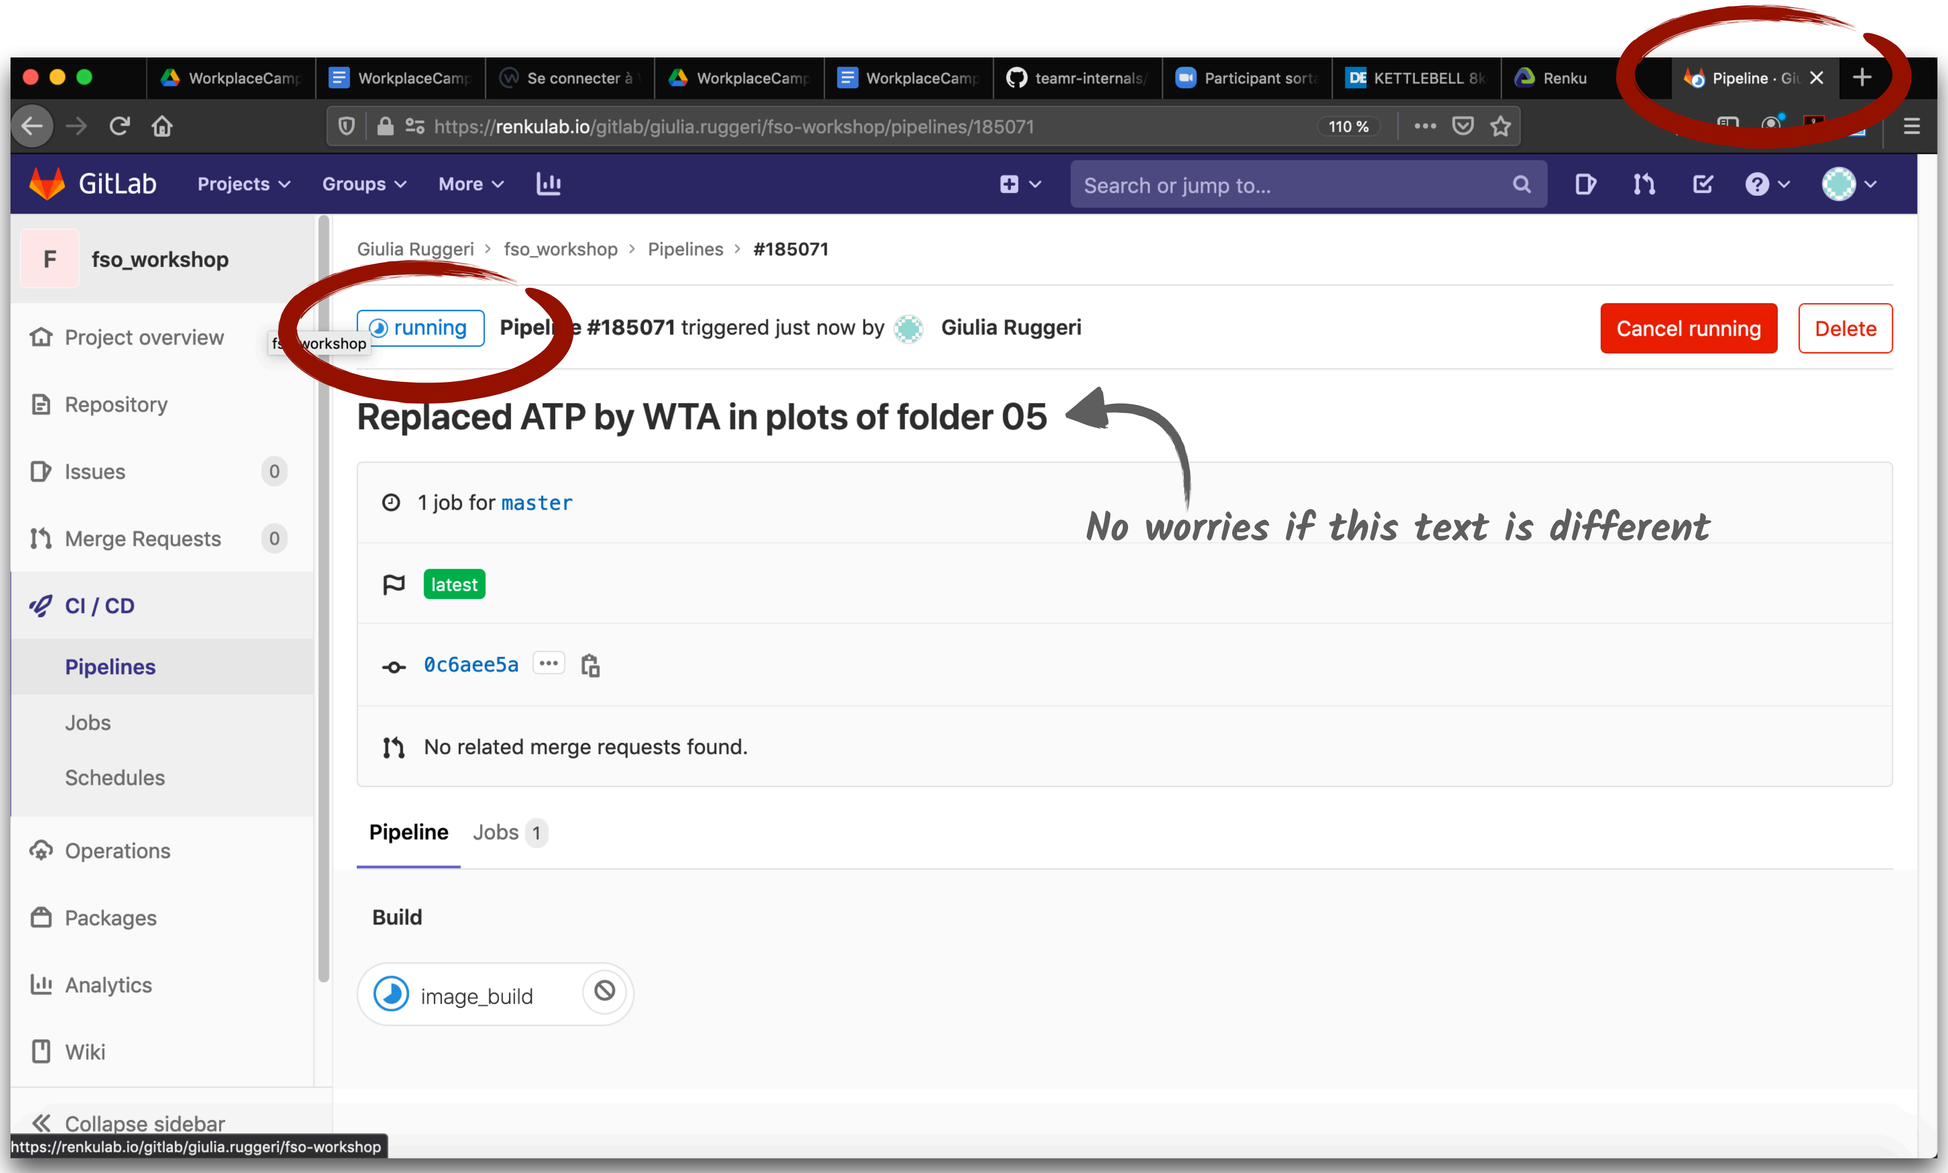

We click on "Run pipeline".

And again, we click on "Run pipeline".

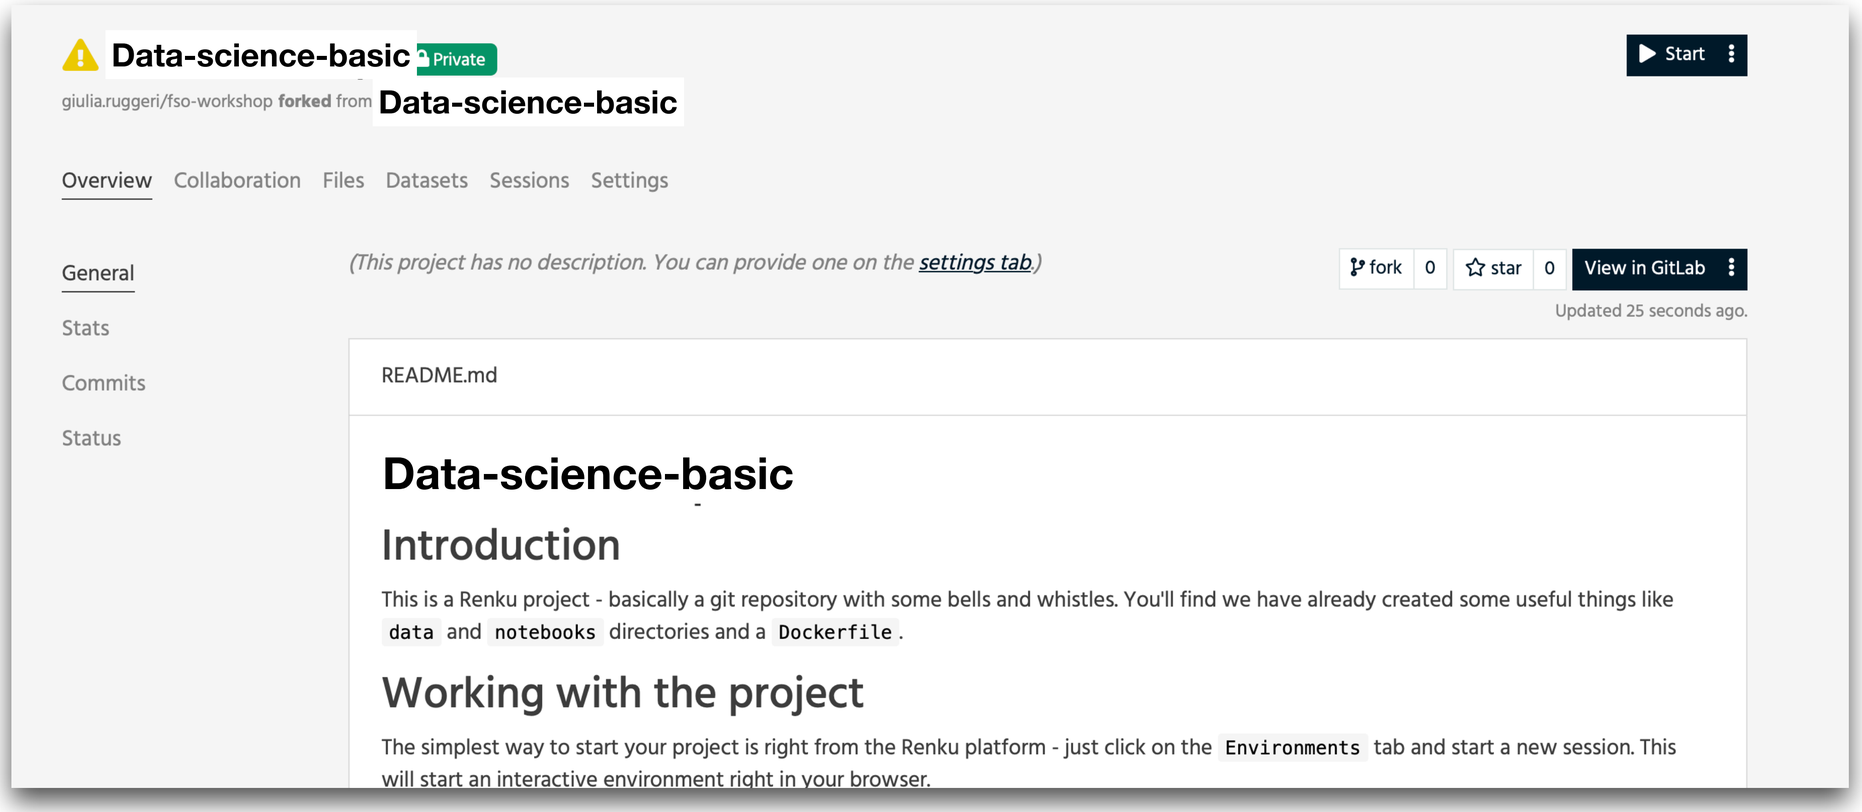

You can now close the tab and go back to Renku.io

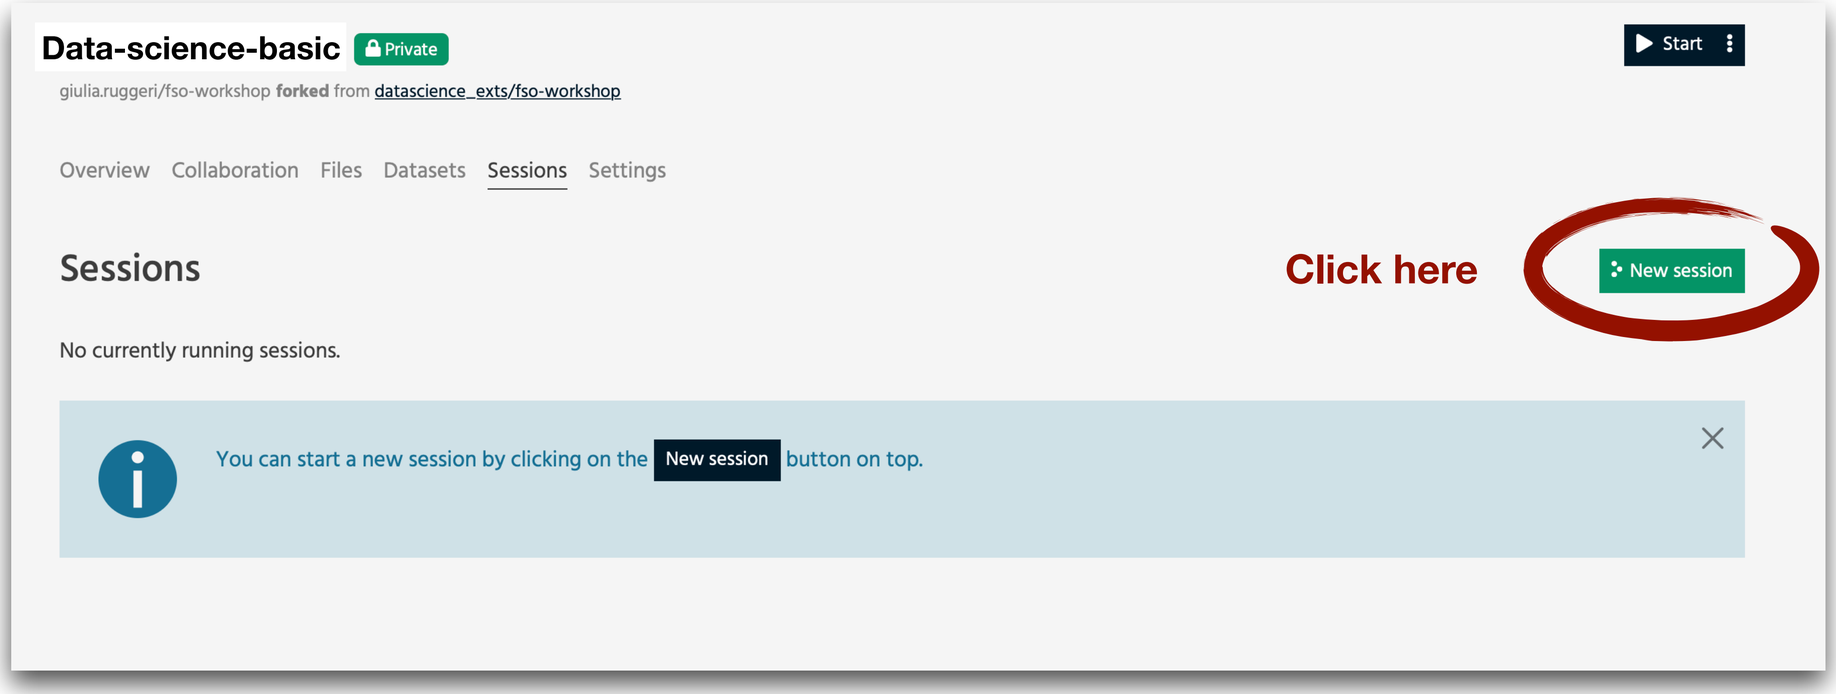

No worries if this text is different

Wait until you see the blue icon "running".

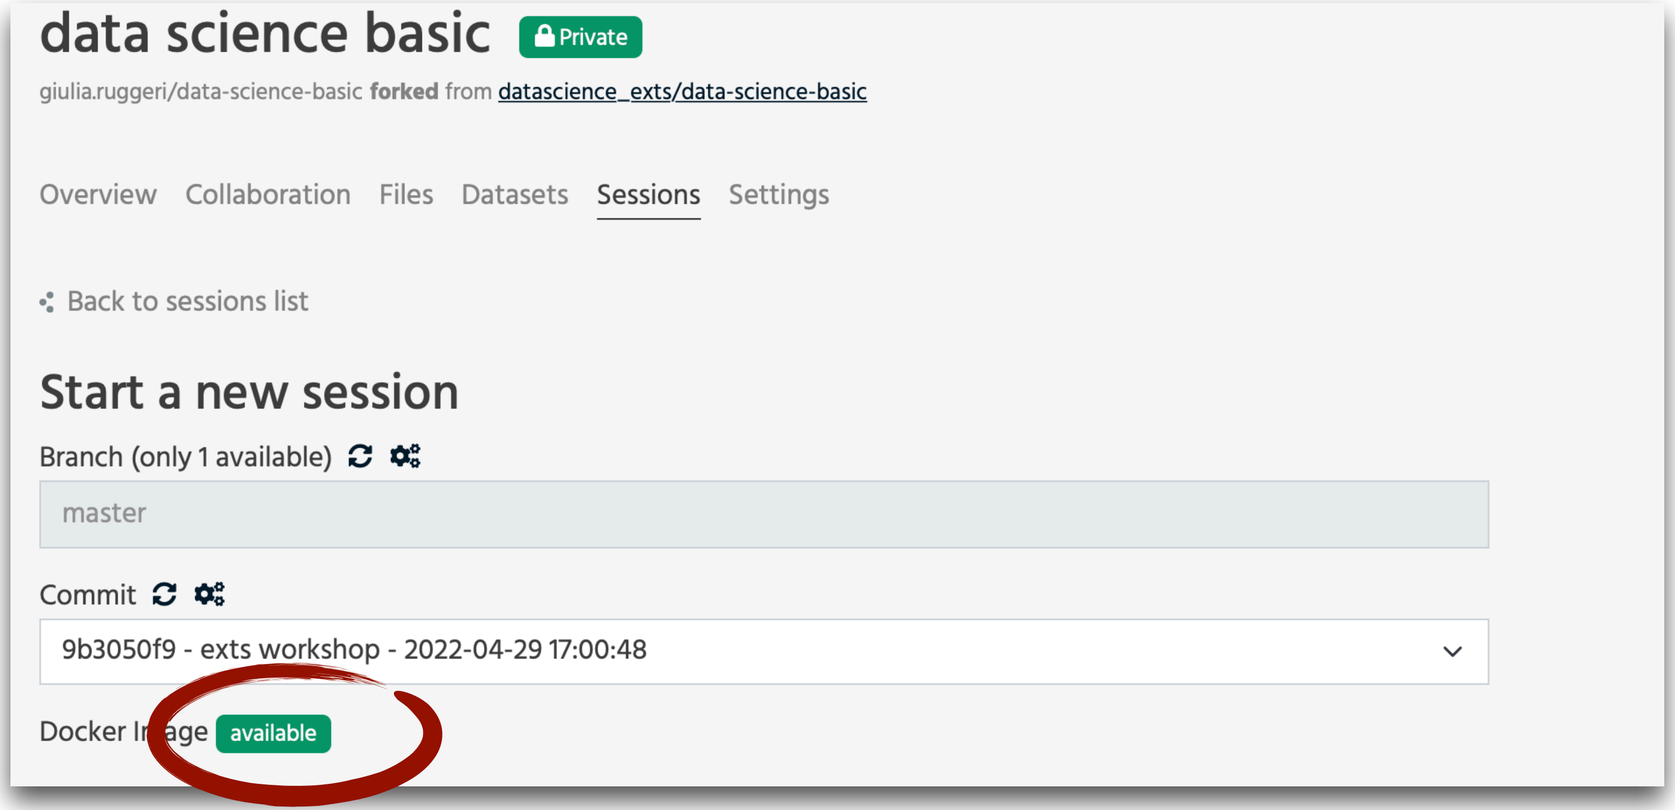

You can now close the tab and go back to Renku, where we were before.

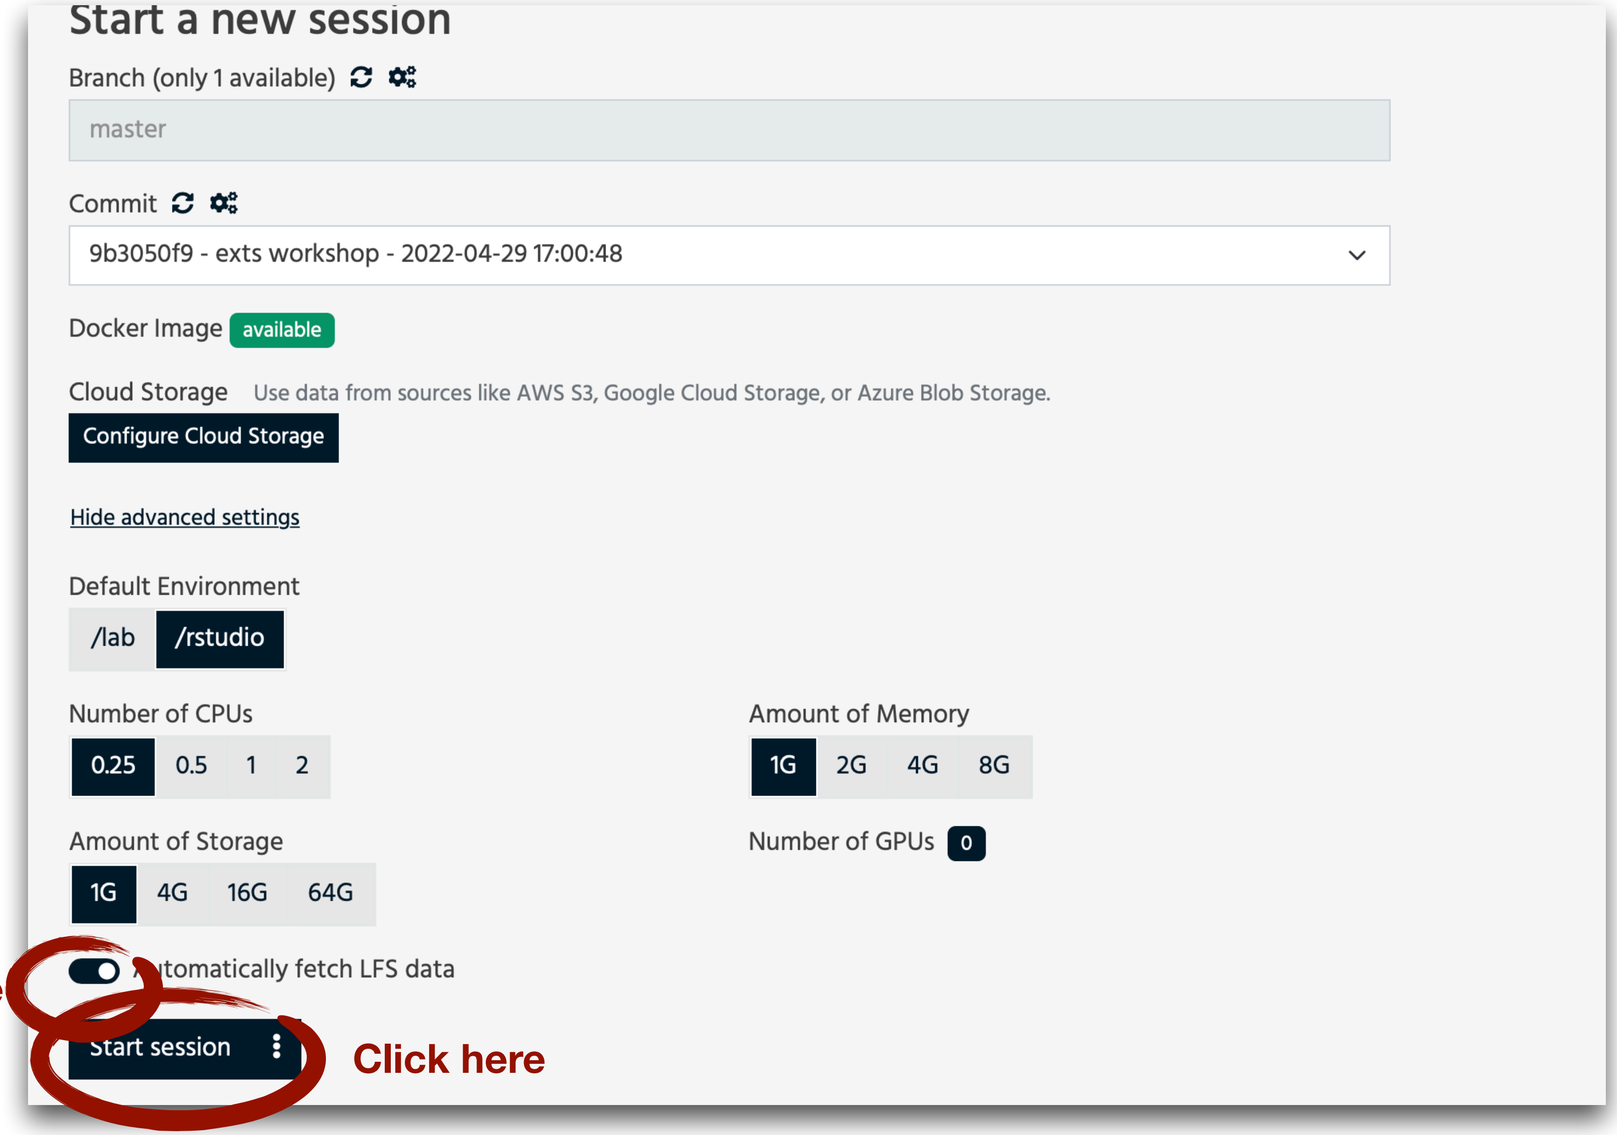

In your own instance of the data-science-basic (check above that you are in your own project, forked from the main one), go to the "Sessions" tab.

Now click on "New session".

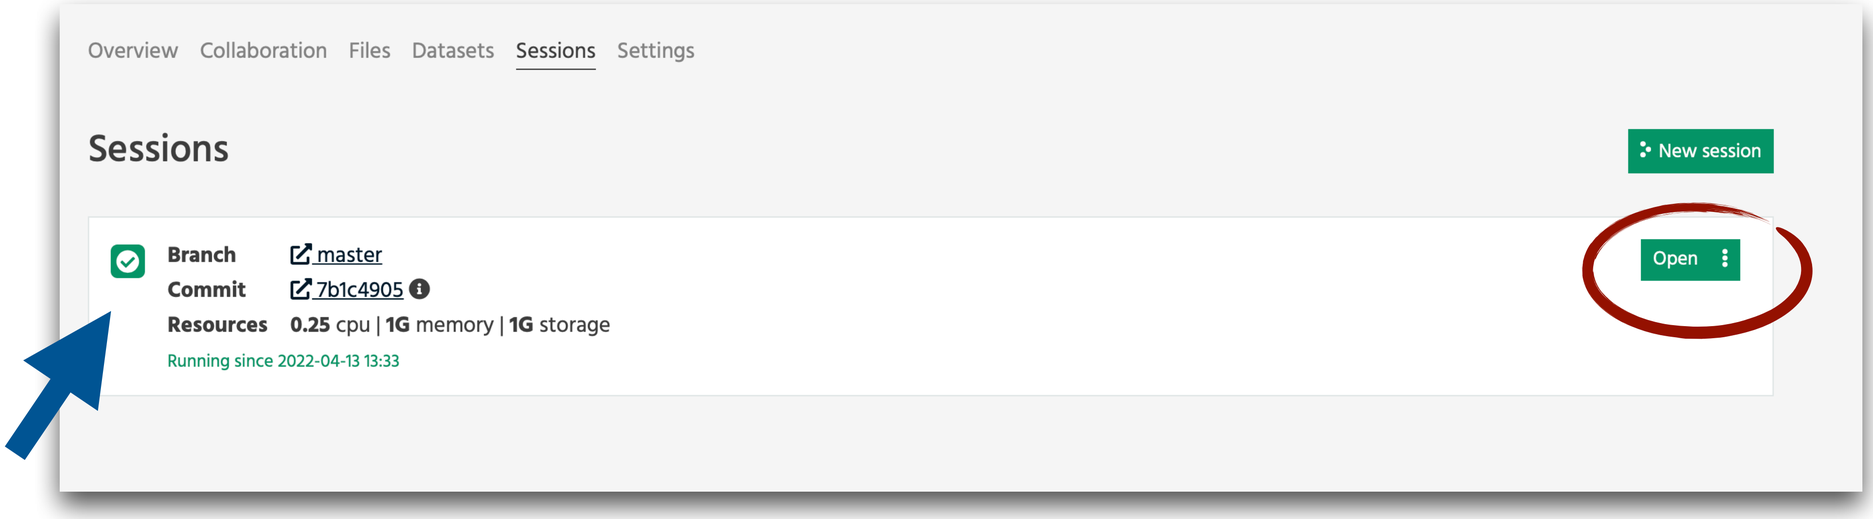

After some time, you should see that the session is available

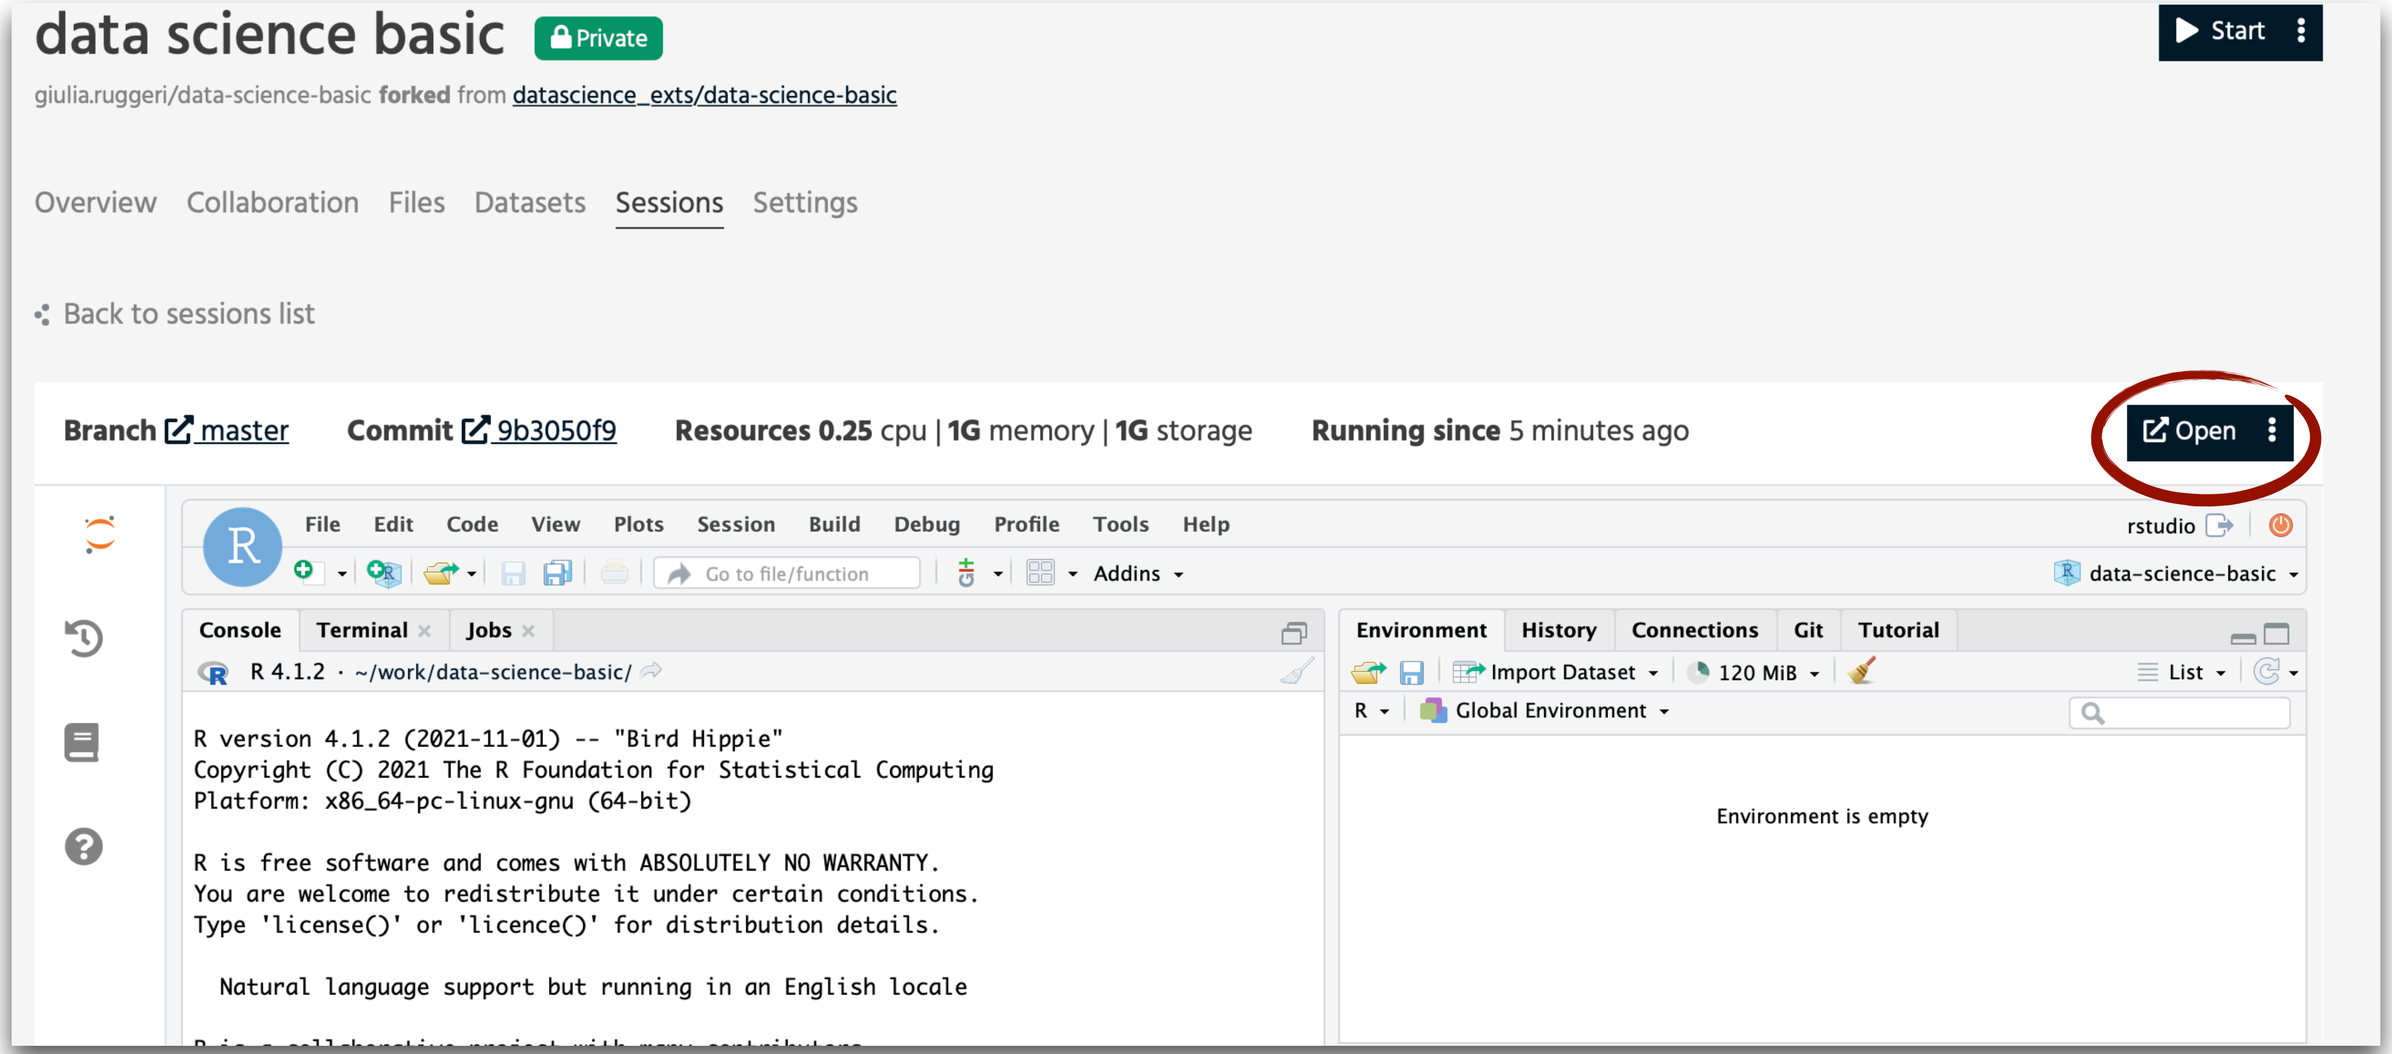

After some time (generally a few seconds), you should be prompted with this window. Keep all the options as is apart for the "Automatically fetch LFS data", that you should start.

Then click on "Start session". At this point, your virtual environment is building, which may take a few minutes.

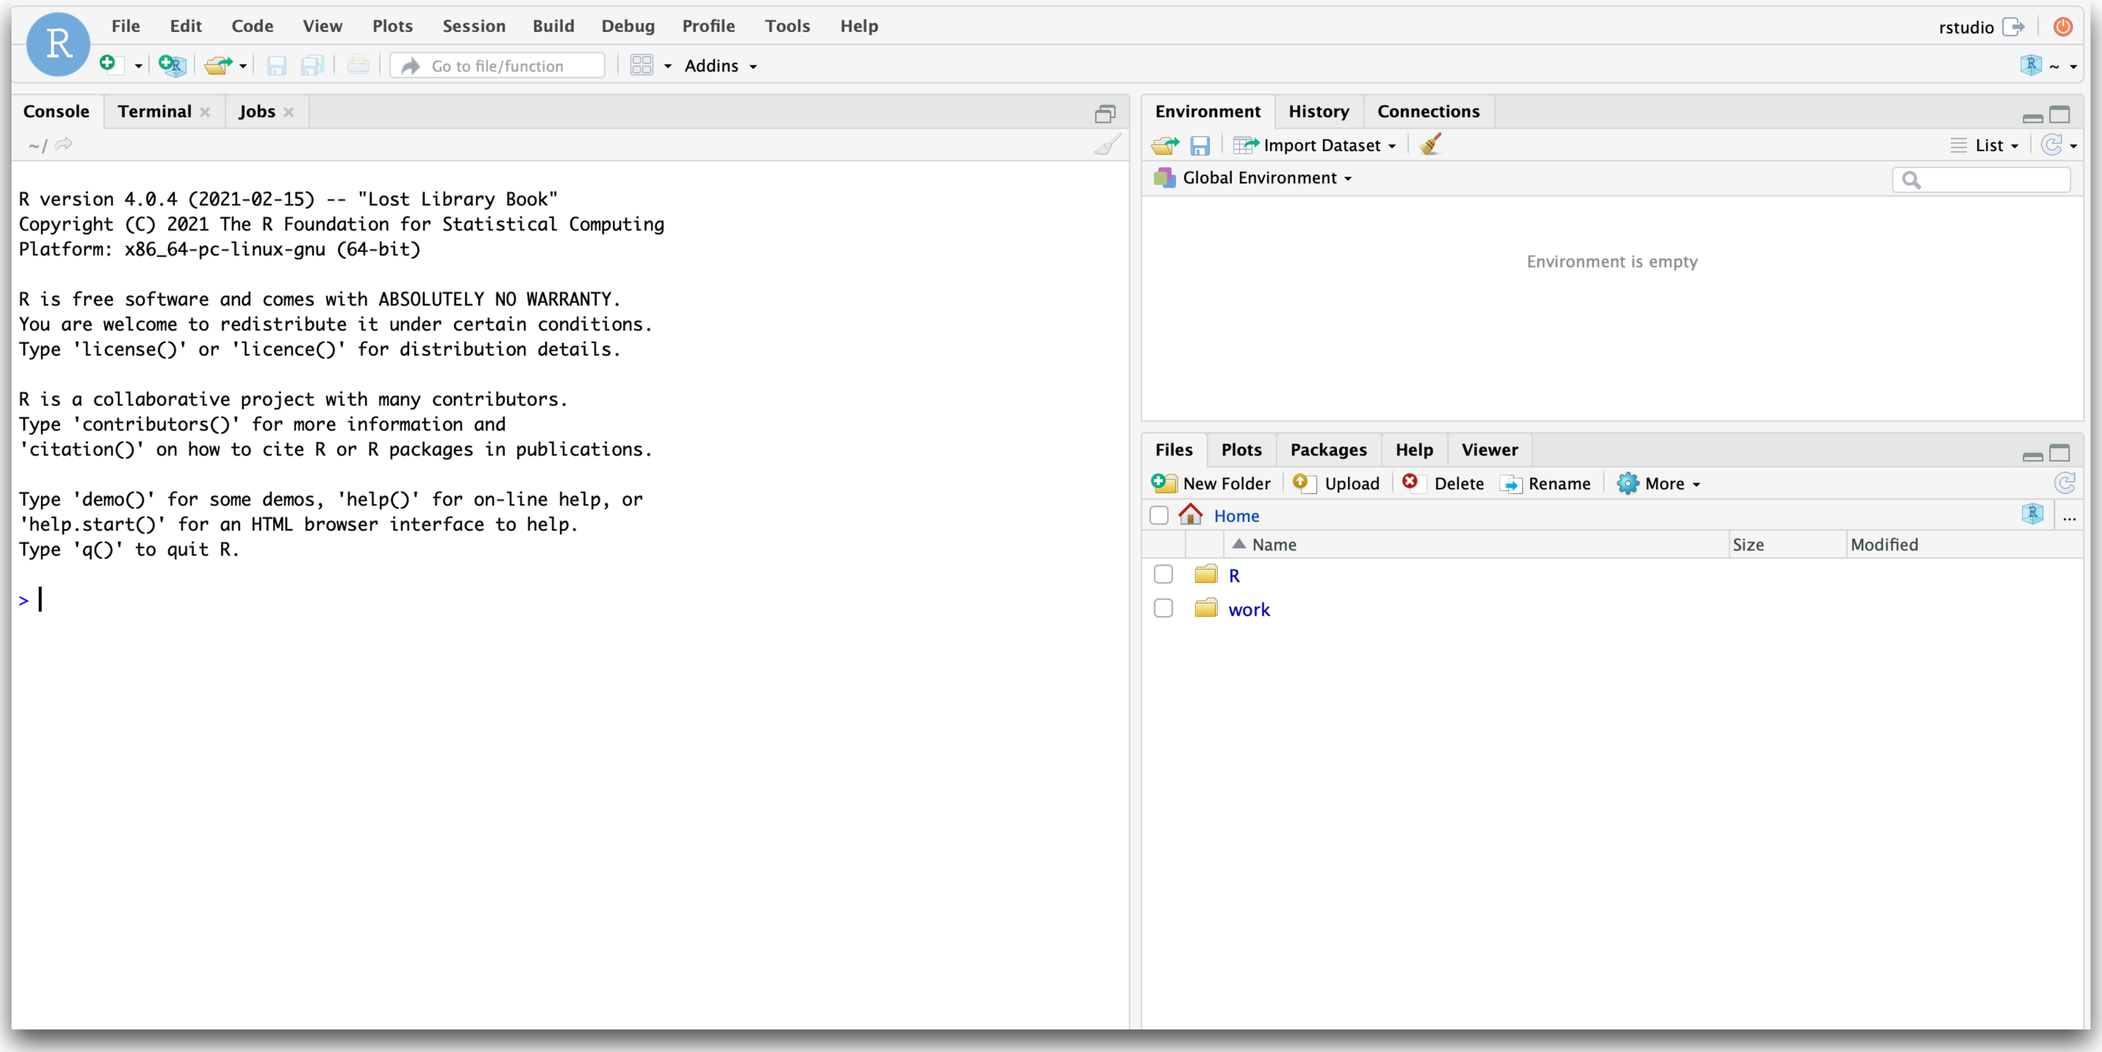

Do not worry if it takes a long time, this is normal the first time.

You will see a rotating yellow square for some minutes before it becomes green.
It may take some time to build this.
Once the square is green, you can connect to your virtual environment. We will do it during the workshop, no worries. If you already want to see what it looks like, click on "Open".

And then click again on "Open".

If you open it, your RStudio environment opens directly in your browser.

This is the environment we will use during the workshop.
