

Go to https://renkulab.io and set up your account or sign in if you are already registered. Renku now allows you to register only using SWITCH edu-ID or Github. Choose the one of your preference

Go to: https://renkulab.io/projects/datascience_exts/data-science-basics-2023

Now you need to fork the project into your own space. This creates a copy of the project on your own page that you will work on.

Fork project data-science-basics-2023

Title *

data-science-basics-2023

A brief name to identify the project. There are a few reserved names you cannot use

Namespace *

giulia.ruggeri

Identifier *

giulia.ruggeri/data-science-basics-2023

This is automatically derived from Namespace and Title

Visibility *

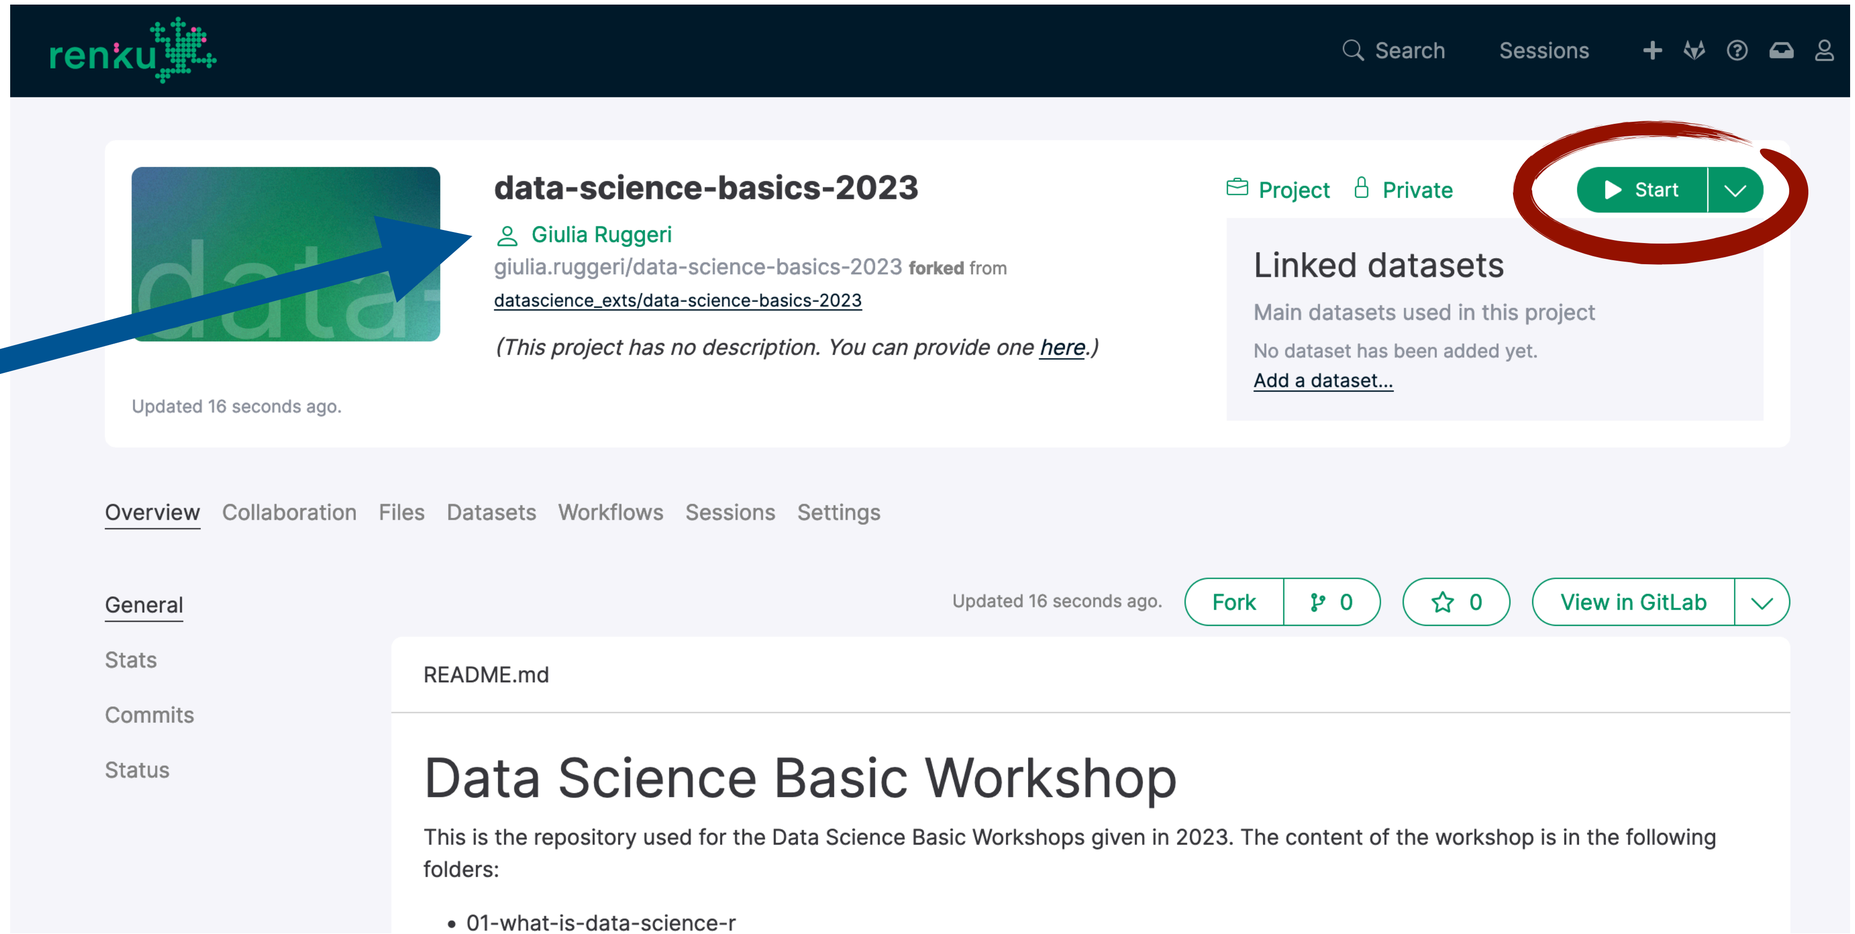

Public	Internal	Private
Access without authentication	Access only for authenticated users	Access only for the creator or contributors

Public and Internal options are not available due to namespace restrictions

Fork Project

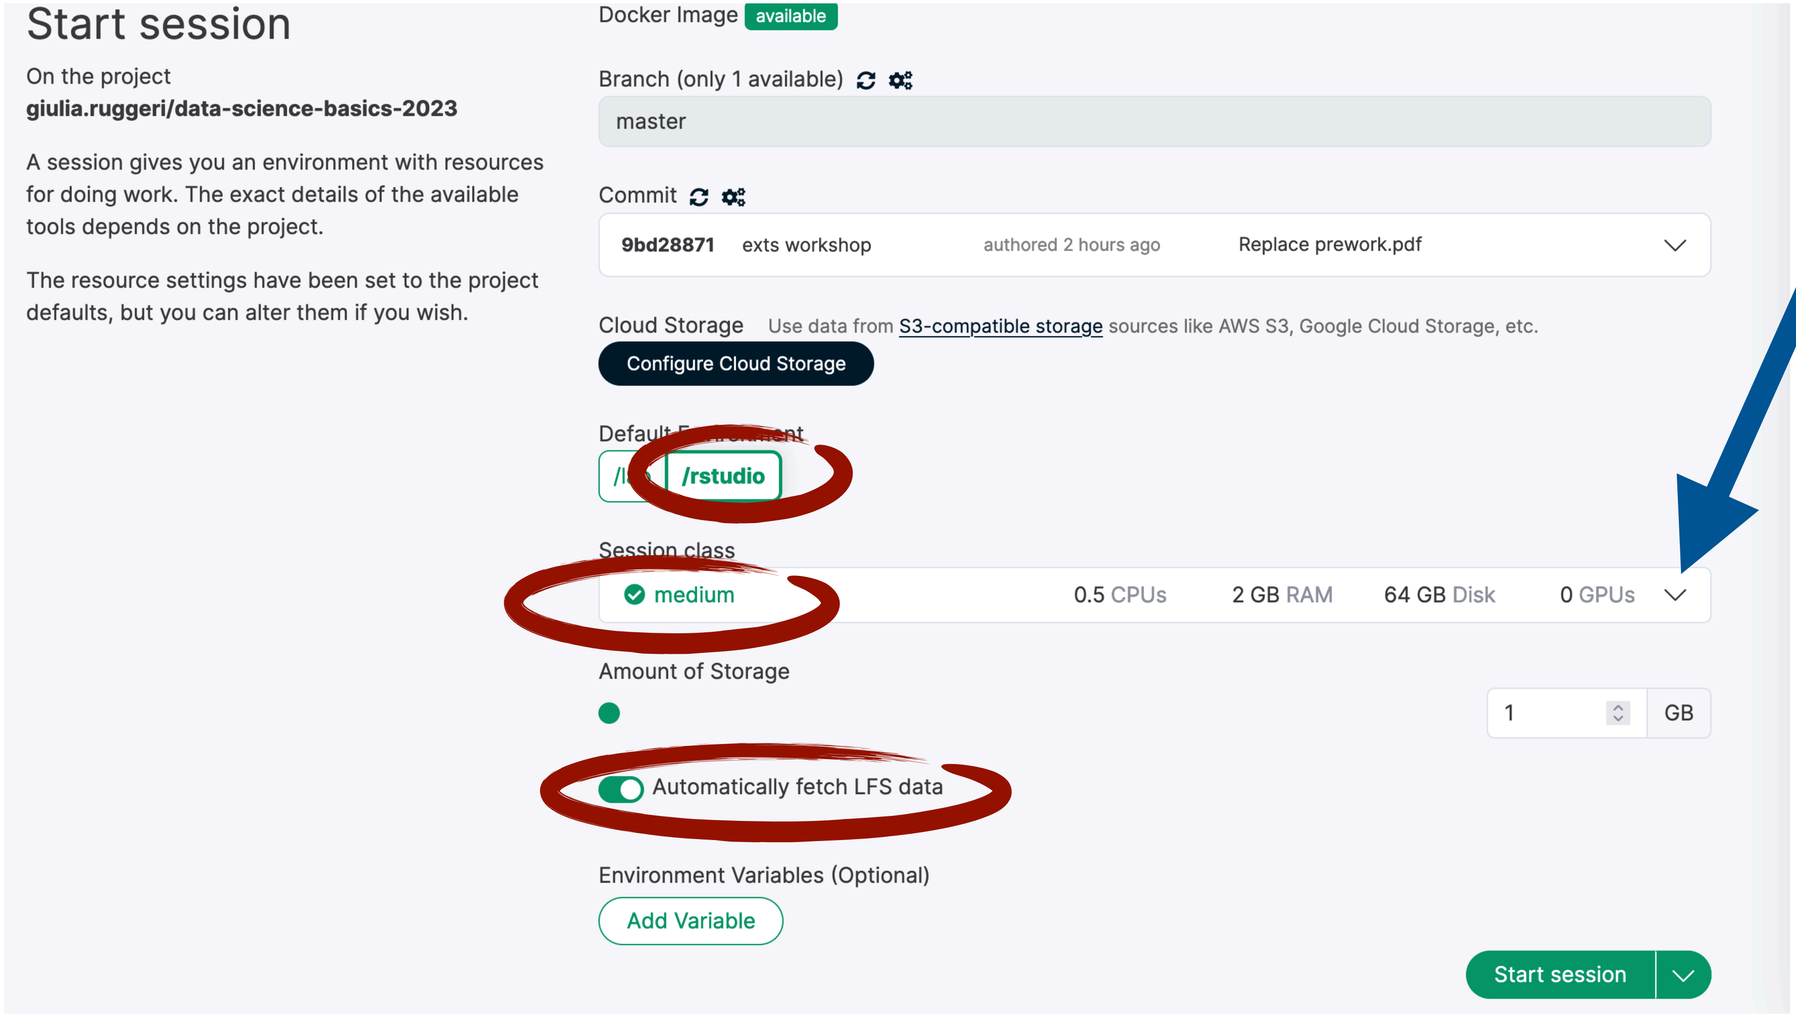

Click here

Now you will be redirected to your own instance of the data-science-basic (check above that you are in your own project, forked from the main one). Then click on start, to start a new session.

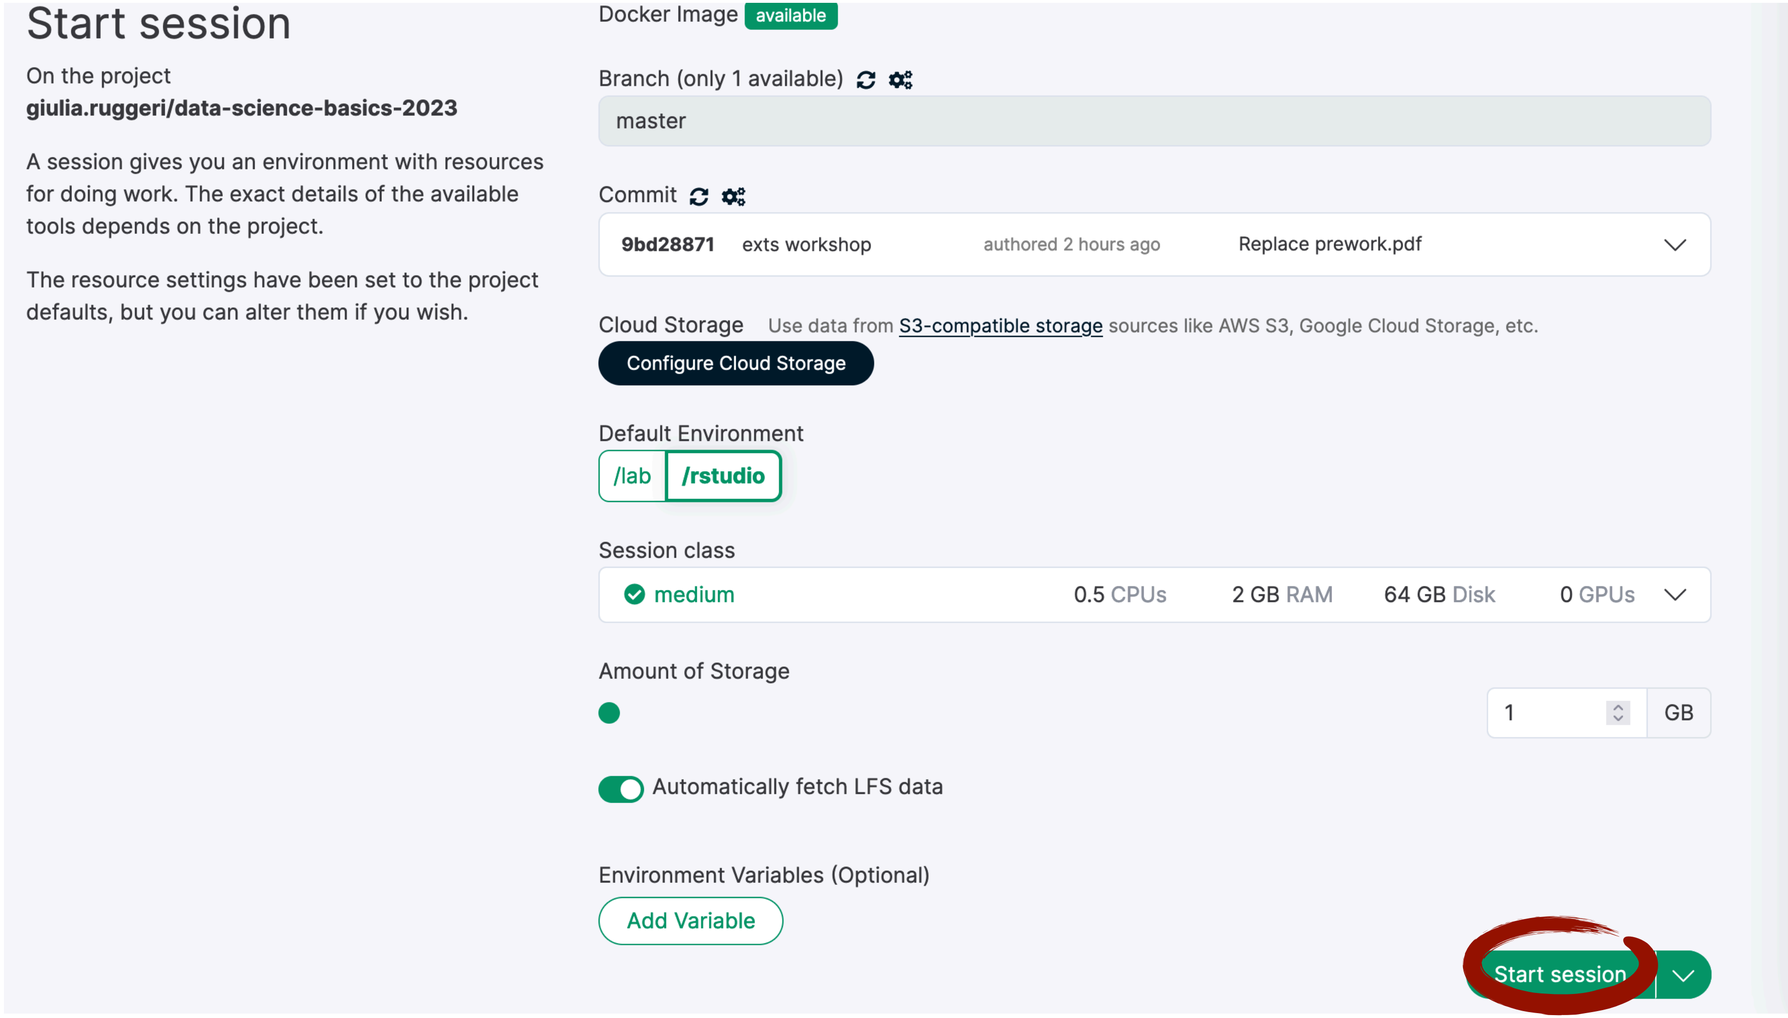

This step might take a maximum of a few minutes. Time to grab a coffee!
Wait until the Docker image is built and becomes available (in green).

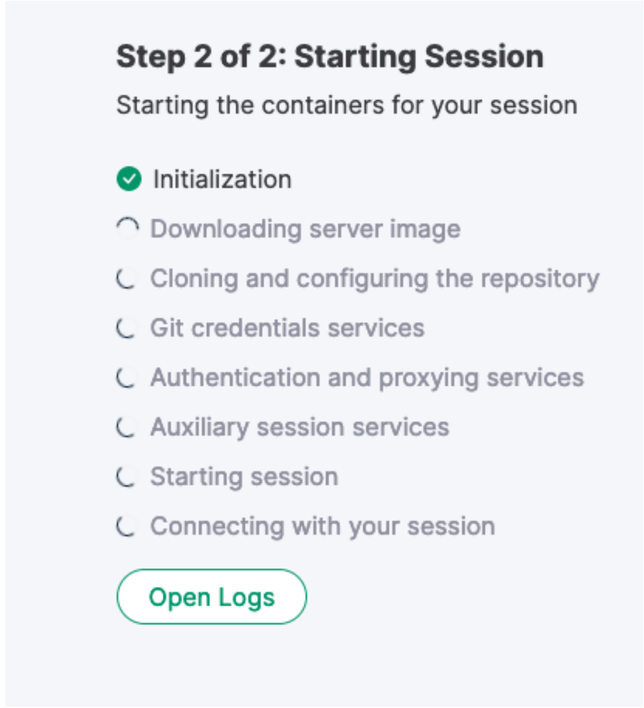

Click here to select the “medium session class”

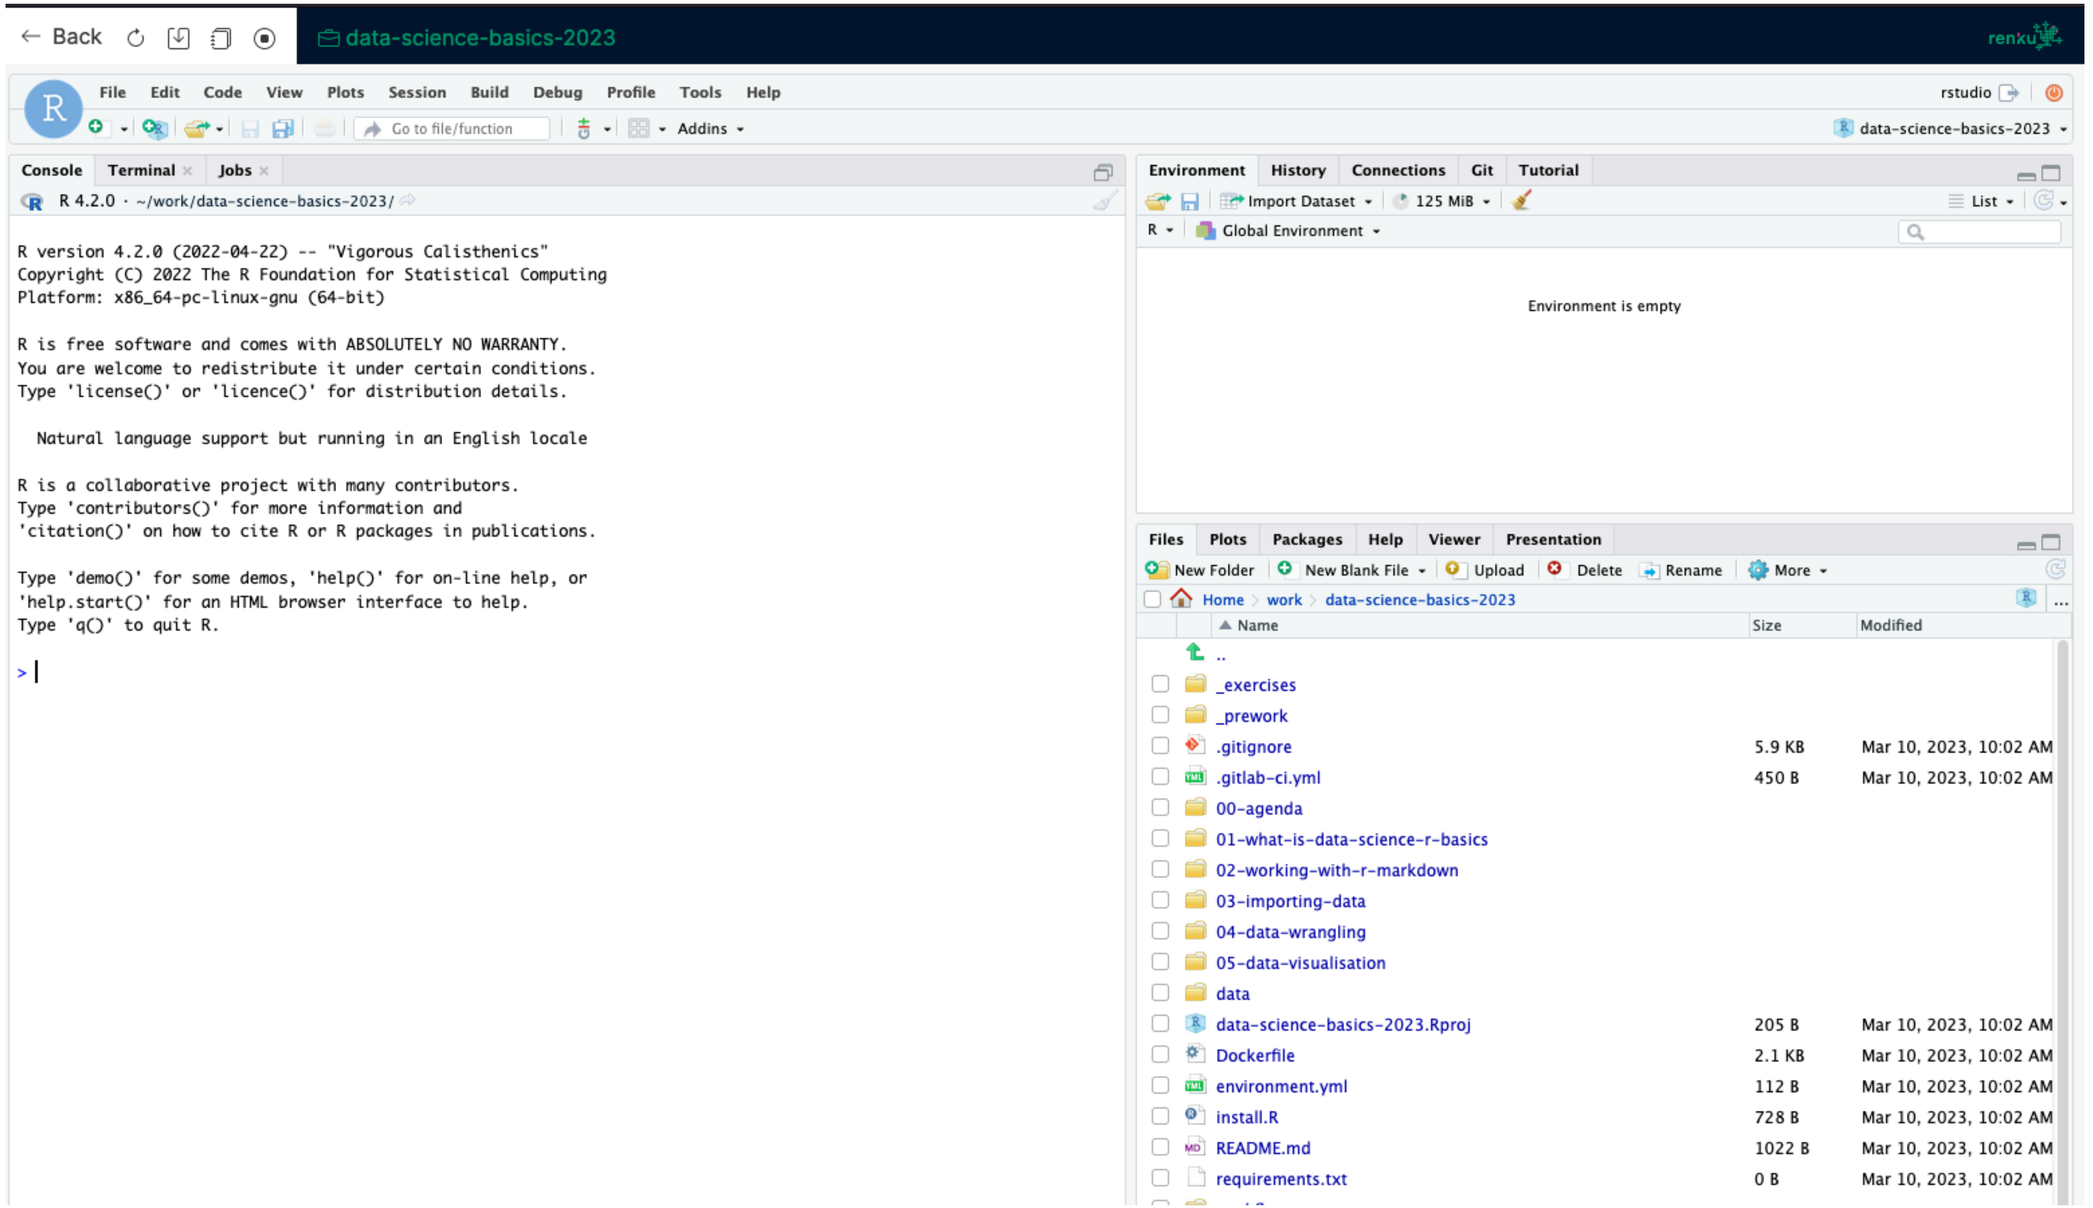

Now the Docker image is available, and you can start the session. Before starting, select the Correct configuration: /rstudio environment, Medium session class, automatically fetch LFS data

Once you have set the right configuration, you can click on “Start session”. At this point, your virtual environment is building, which may take a few minutes.
Do not worry if it takes a long time, this is normal the first time.

This step might also take a couple of minutes. The session is now building.

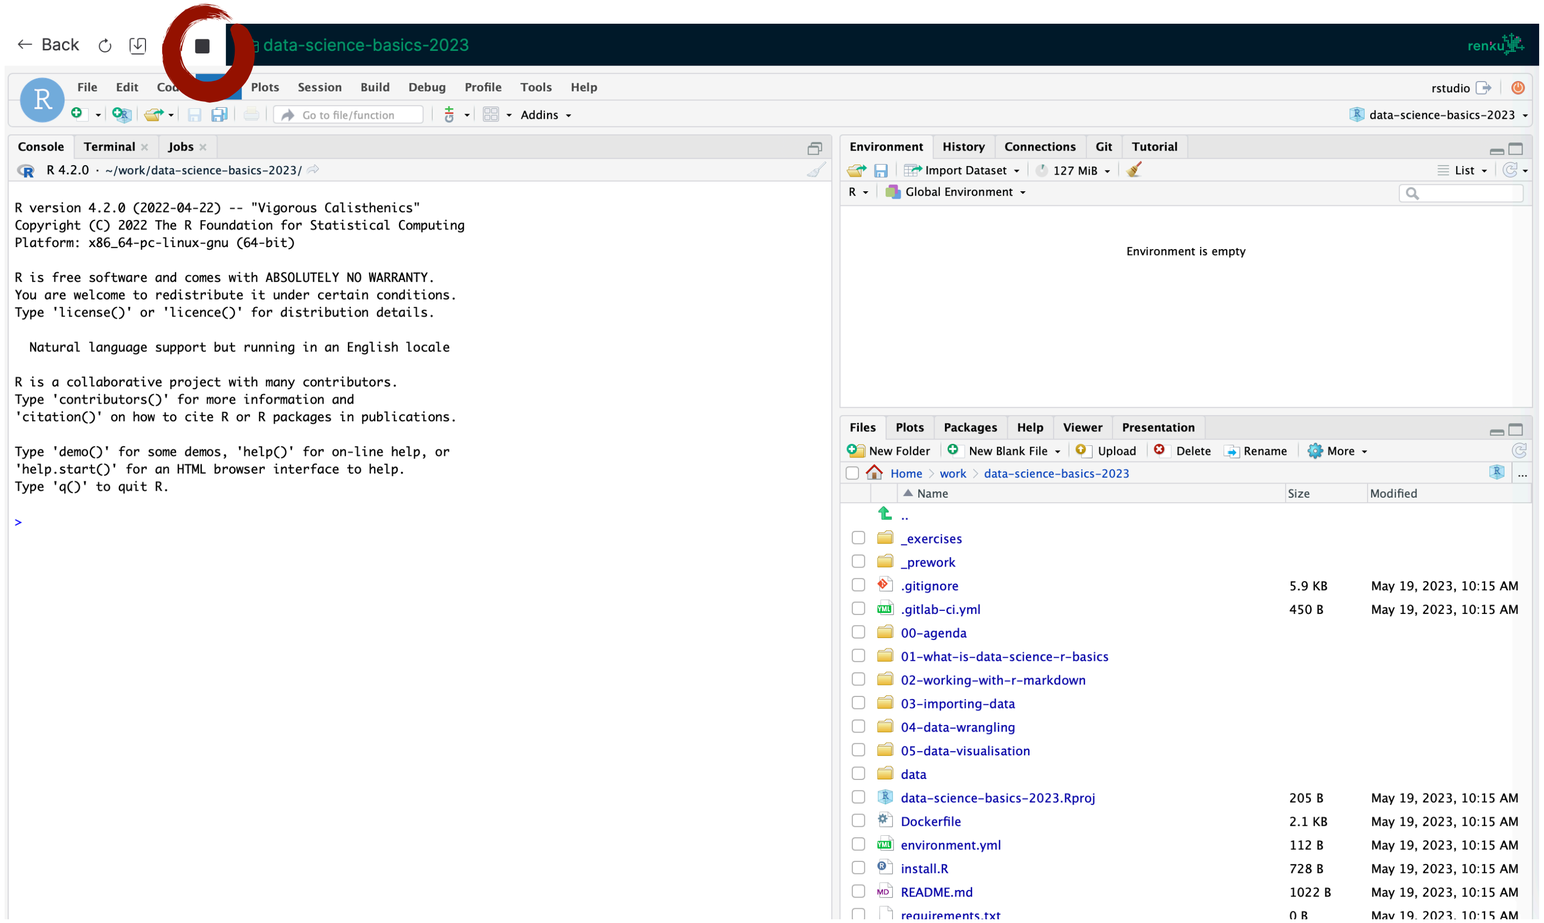

Now you should have the RStudio environment opened in your browser.
This is the environment we will use during the workshop.

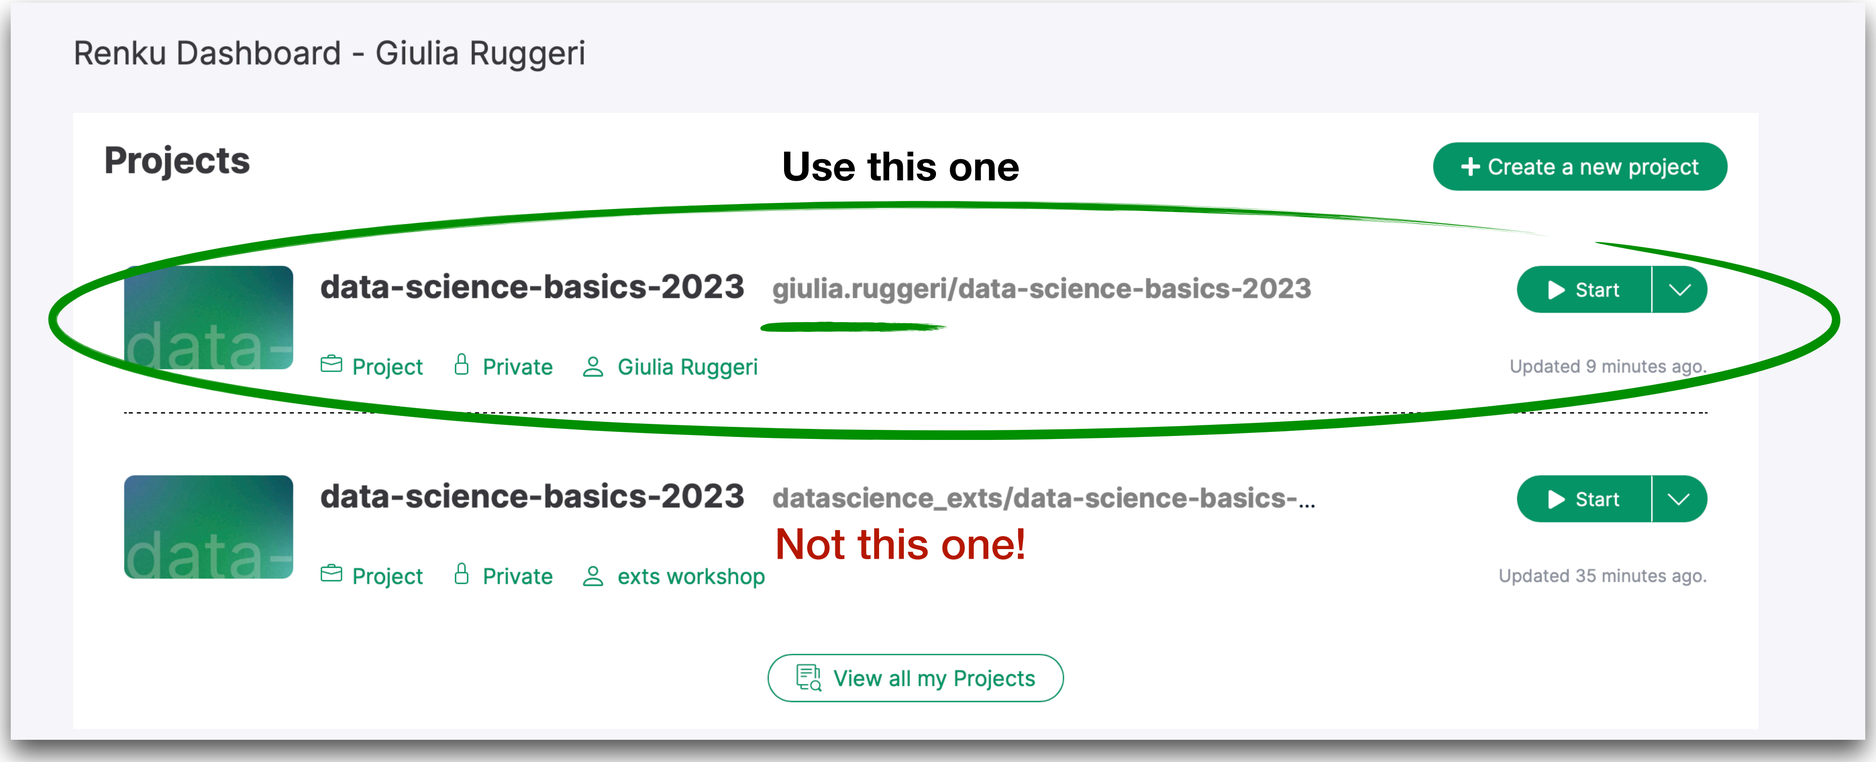

Workshop pre-work

- In order for you to familiarize with the environment, now open the workshop pre work that we have sent you and try to follow the different steps. This will help you familiarize with RStudio environment.
- During the workshop, you will be using R programming language to work on a simple data science problem. This will allow you to gain experience on loading, cleaning, exploring, tidying and visualizing data using R.

When you finish working, and you want to close the session Click here.

When you finish working on it, close the session. When you want to open it again, you will just need to open your forked project (the one with your name on it) and click on start again.

During the workshop… use your instance of the project!
Now that you forked the project, if you go back to the dashboard you will see 2 projects with the same name. Use the one in your environment!!
